## CHAPTER 1

### INTRODUCTION

#### Section I. GENERAL

##### 1-1. Scope

This manual contains instructions for organizational, direct support, general support and depot maintenance. They apply to the Caliber .30 Machine Guns, M1919A4, M1919A6 and M37 (with and without sights); and Machine Gun Tripod Mount, M2.

##### 1-2. Forms and Records

a. *General.* DA Forms and procedures used for equipment maintenance will be only those prescribed in TM 38-750, Army Equipment Record Procedures.

b. *Recommendations for Equipment Publications Improvements.* Report of errors, omis-

sions, and recommendations for improving this publication by the individual user is encouraged. Reports should be submitted on DA Form 2028 (Recommended Changes to DA Publications) and forwarded direct to:

Commanding General  
Headquarters  
U. S. Army Weapons Command  
ATTN: AMSWE-SMM-P  
Rock Island, Illinois 61201

##### 1-3. Administrative Storage

Requirements for administrative storage of this equipment are contained in TM 740-90-1.

#### Section II. DESCRIPTION AND DATA

##### 1-4. Description

a. *Caliber .30 Machine Guns, M1919A4 and M1919A6.* For the description and over-all views of the machine guns refer to TM 9-1005-212-10.

b. *Caliber .30 Machine Gun, M37 (with and without sights).* The machine gun (figure 1-1) is an automatic and air-cooled weapon. It is designed mainly for the secondary armament on combat vehicles (fixed application without sights); or as a tripod mounted ground machine gun (flexible application with sights) by the Marine Corps.

c. *Machine Gun Tripod Mount, M2.* For the description and over-all view of the mount refer to TM 9-1005-212-10.

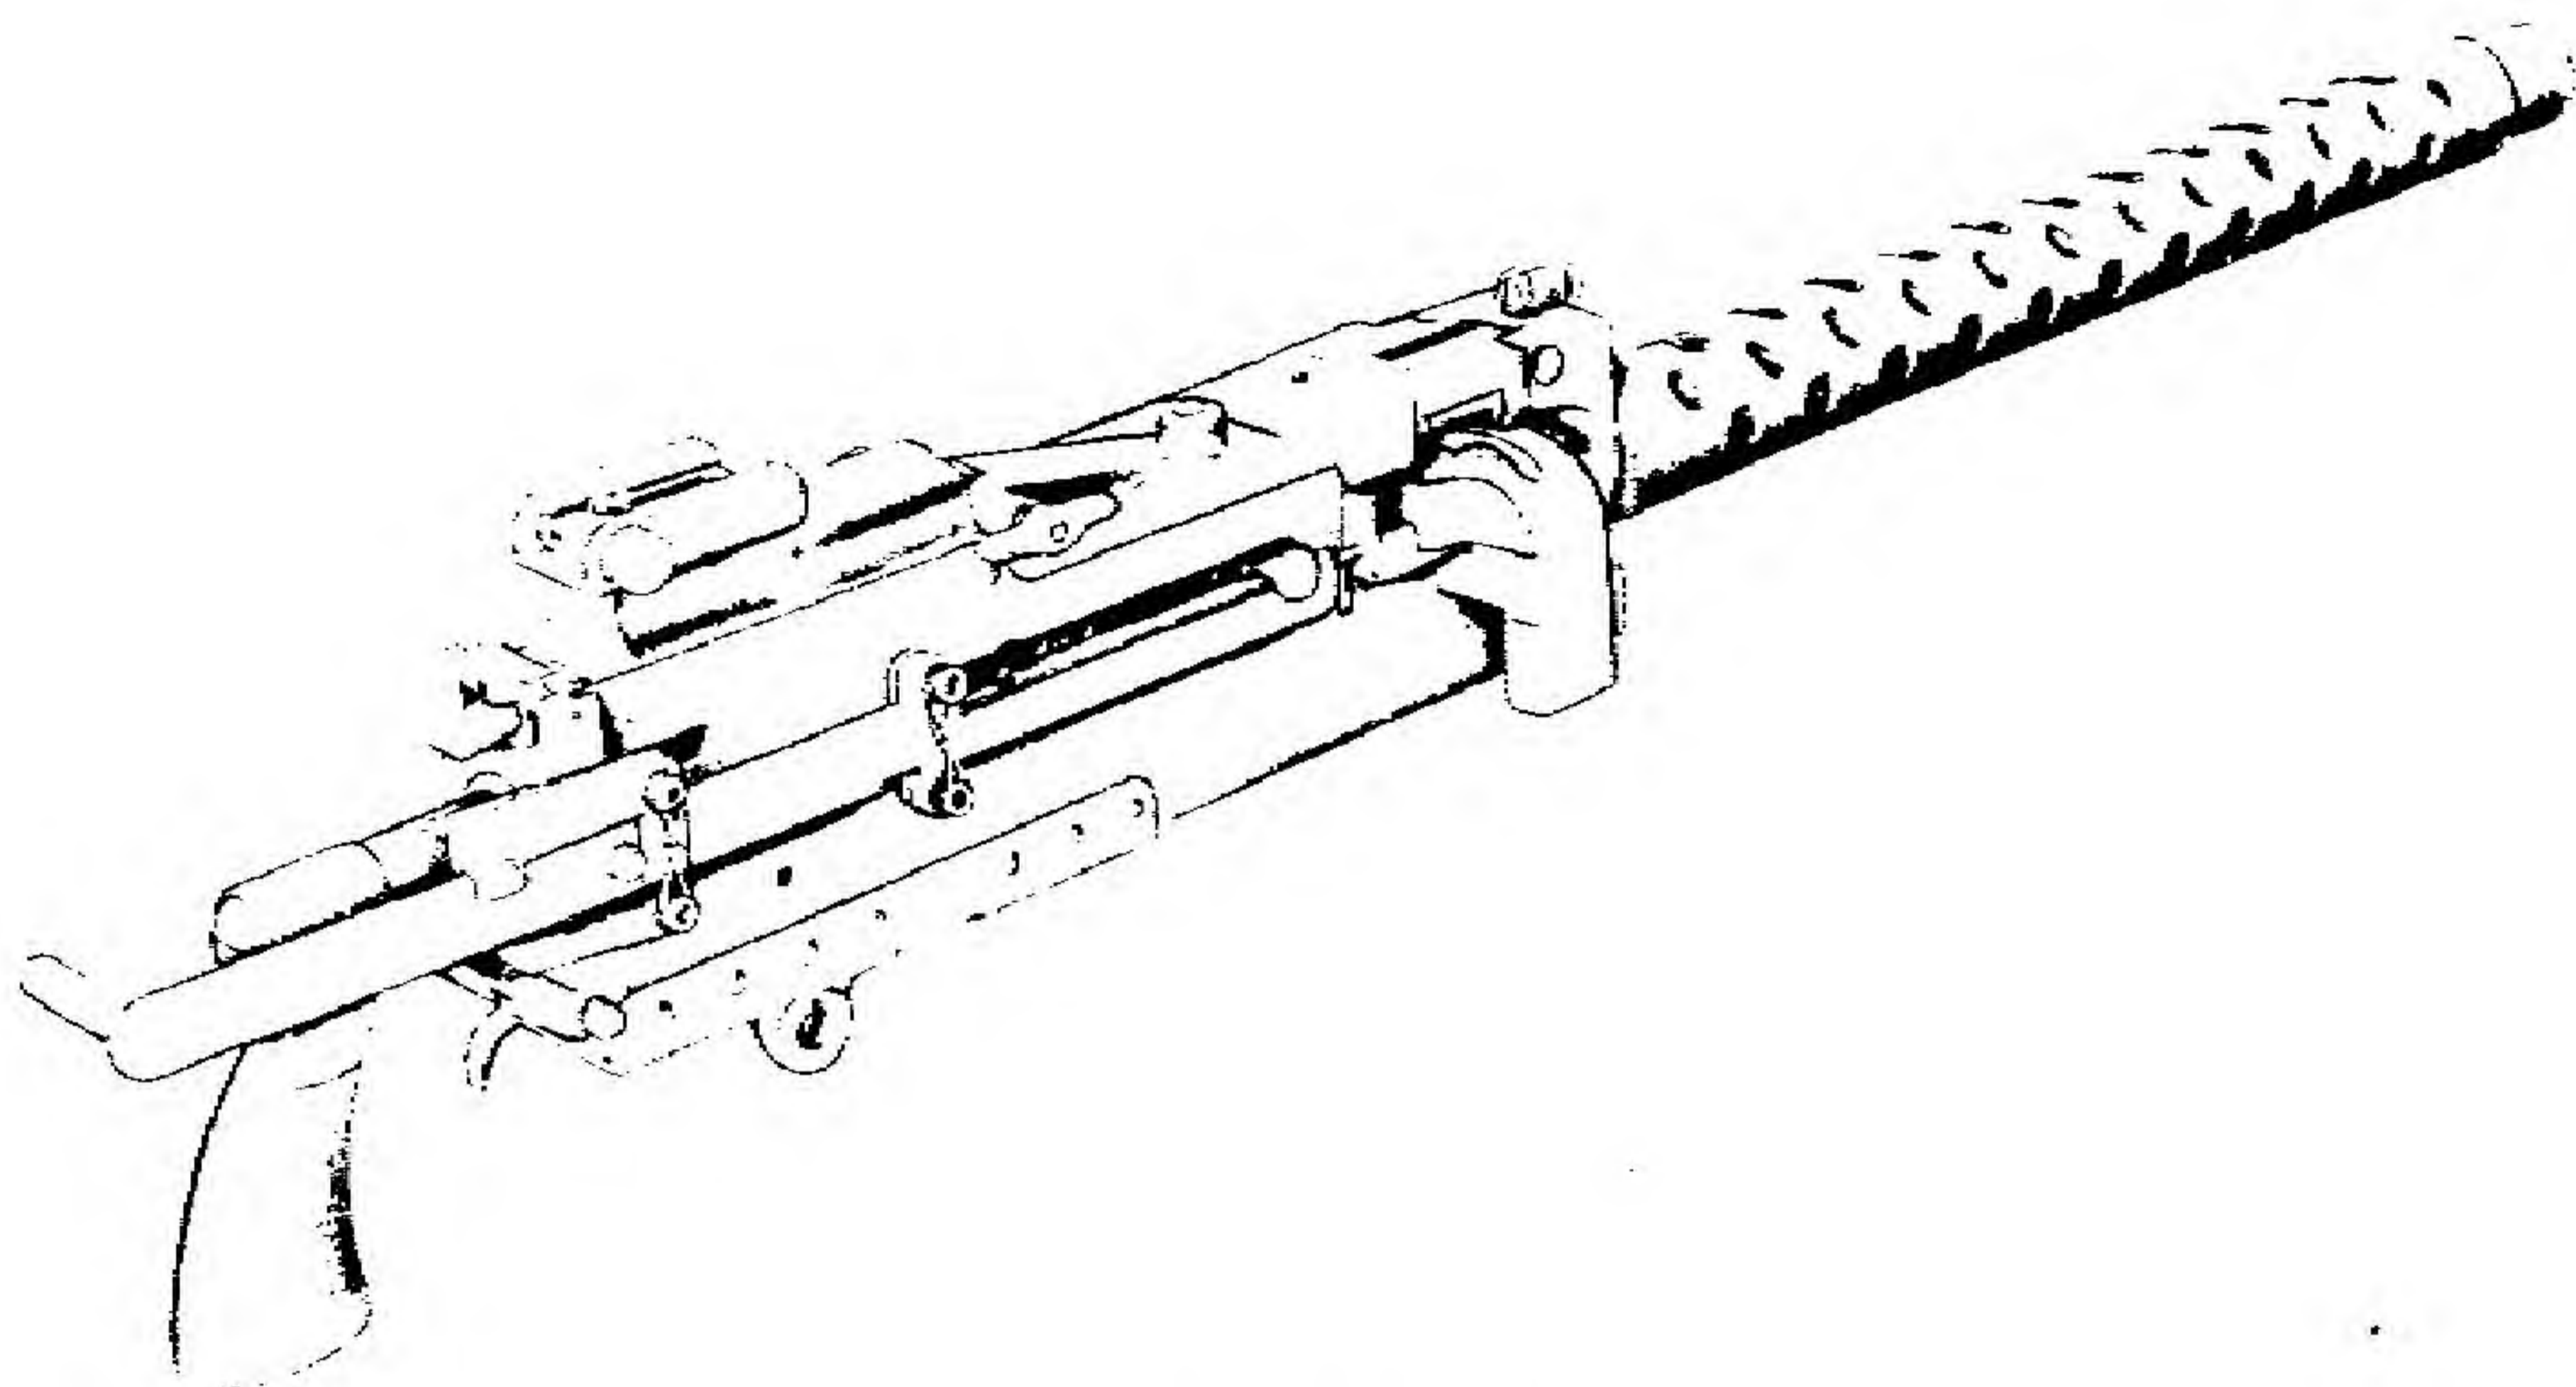

##### 1-5. Tabulated Data

a. *Caliber .30 Machine Guns, M1919A4 and M1919A6.* For tabulated data on the machine guns refer to TM 9-1005-212-10.

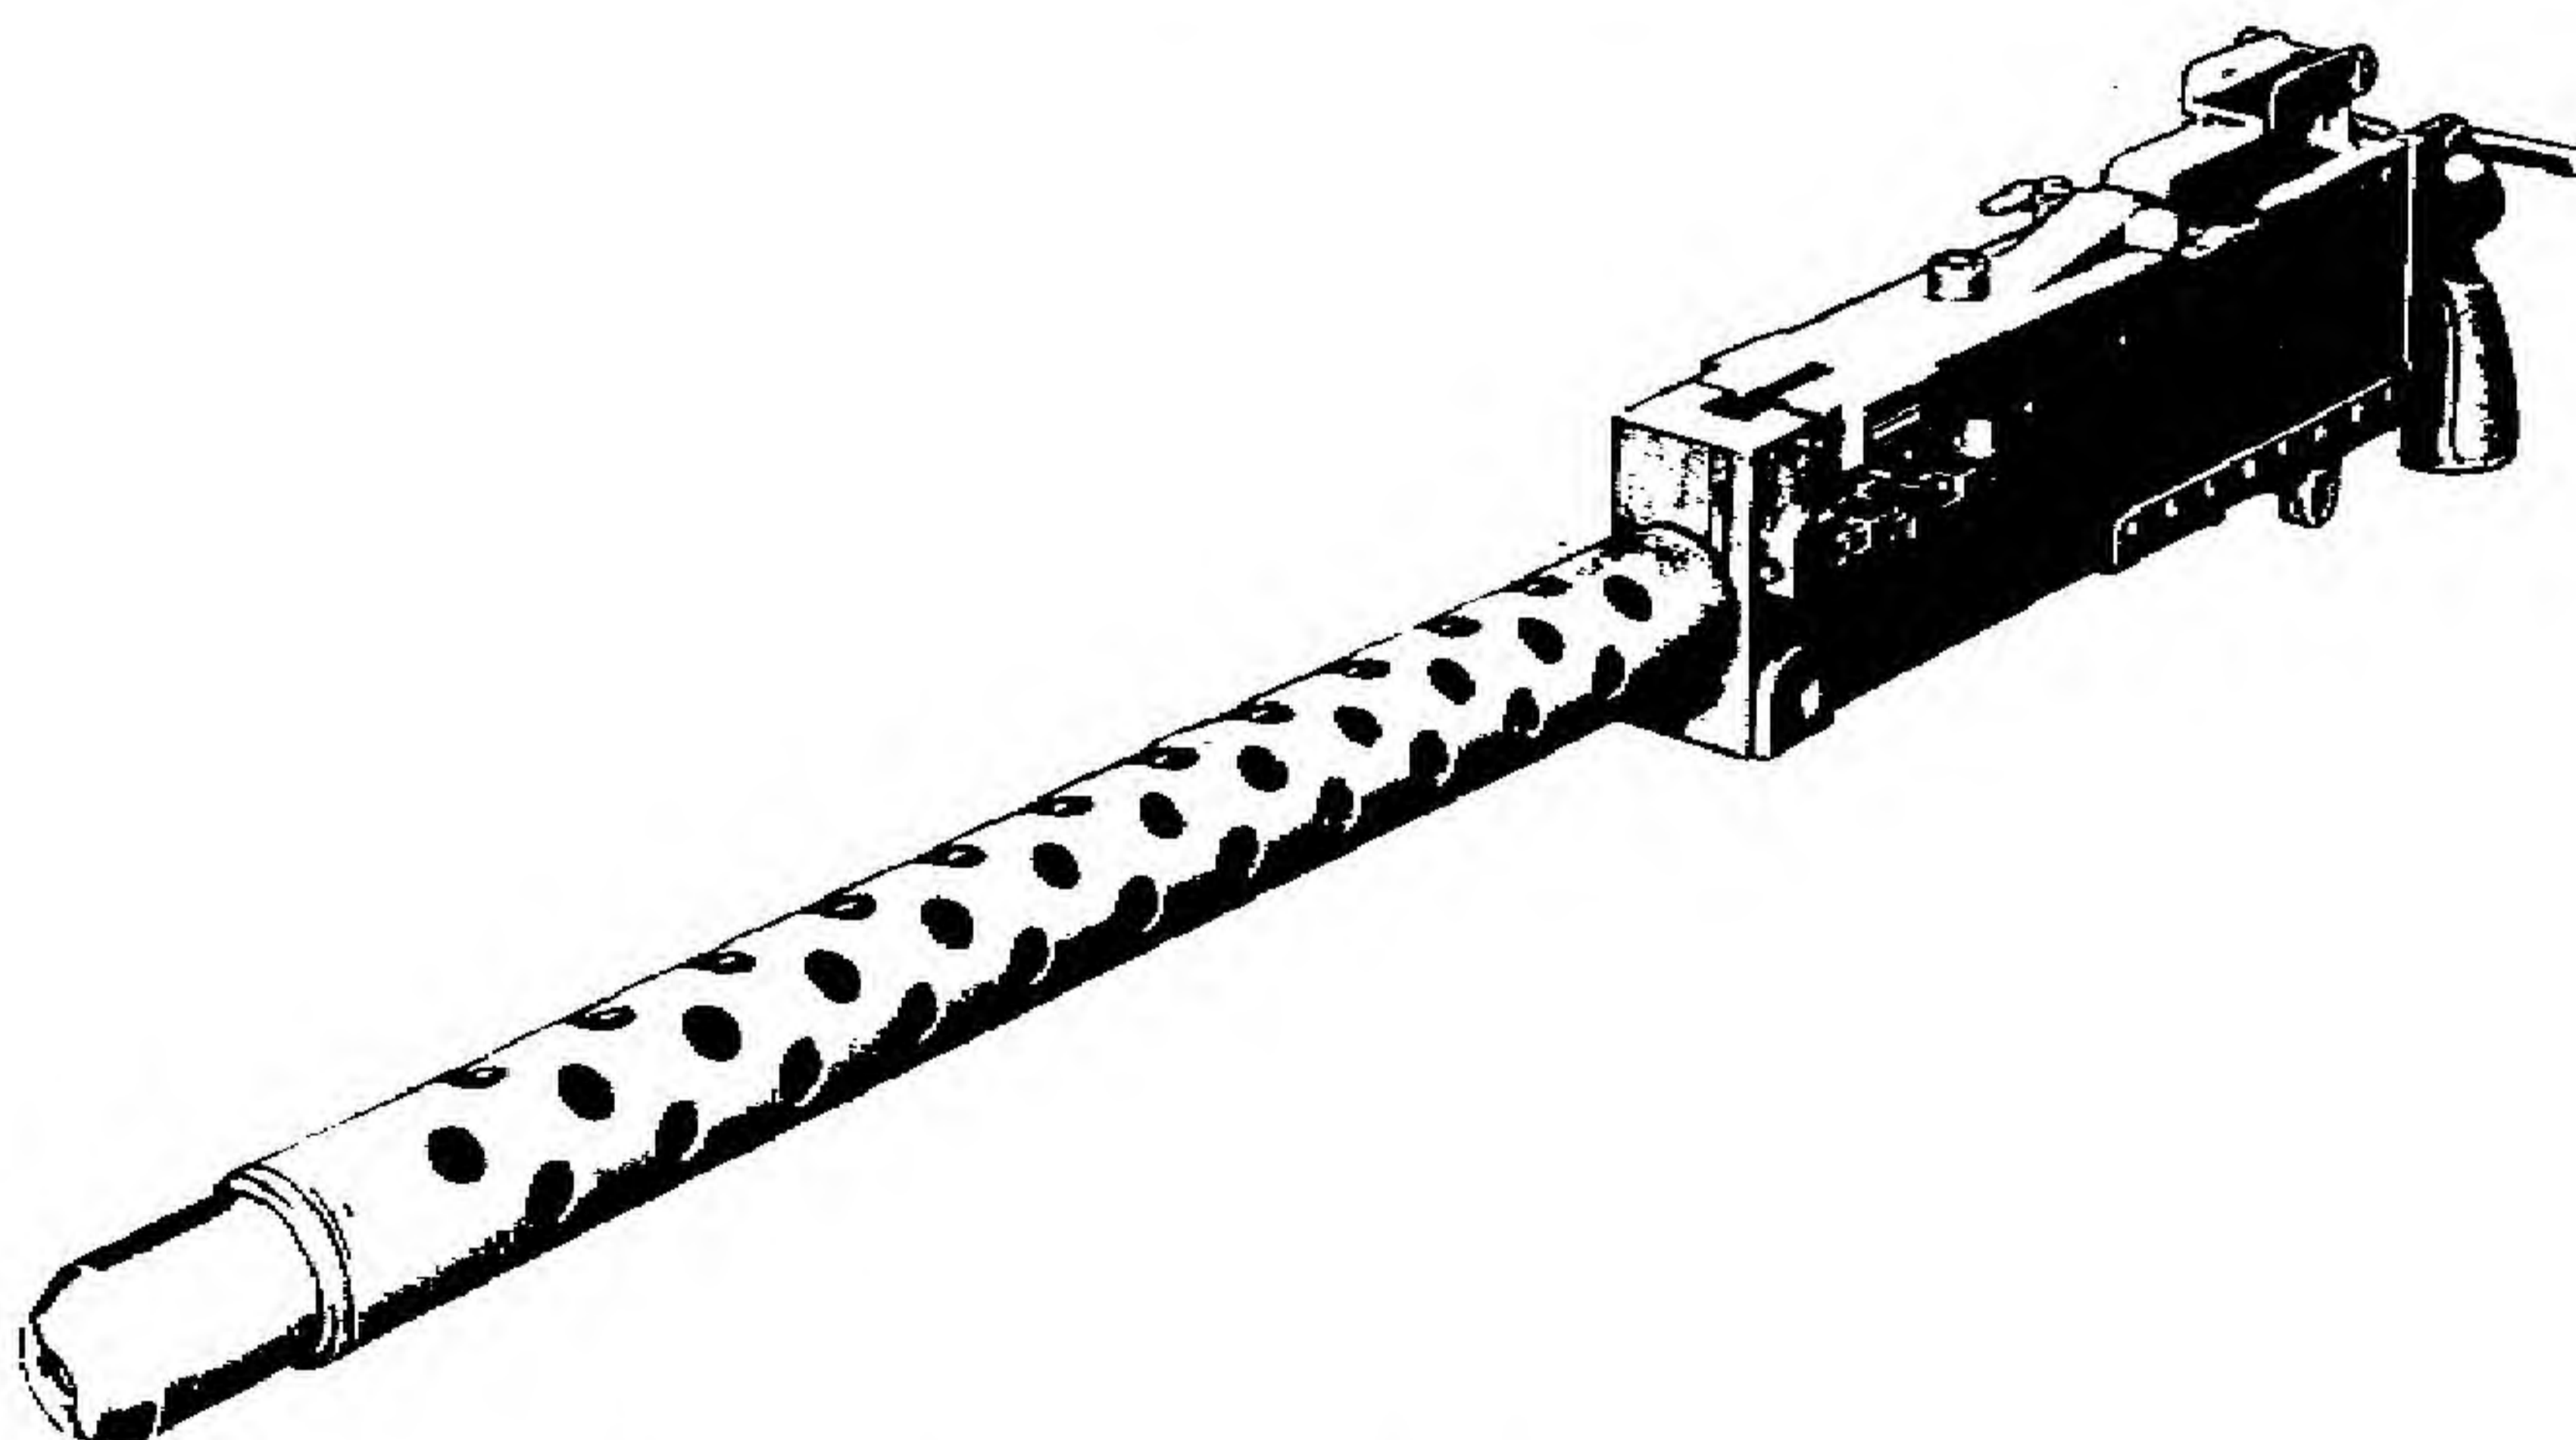

b. *Caliber .30 Machine Gun, M37.*

Weight .....	31 lbs approx
Length of weapon .....	41 3/4 in
Length of barrel .....	24 in
Feed .....	metallic link belt
Rate of fire .....	400 to 550 rds per min
Type of operation .....	recoil
Trigger pull:	
Maximum .....	12 lbs
Minimum .....	7 lbs

c. *Machine Gun Tripod Mount, M2.* For tabulated data on the mount refer to TM 9-1005-212-10.

A - RIGHT REAR VIEW WITH SIGHTS

E - LEFT FRONT VIEW W/O SIGHTS

WE 6250

*Figure 1-1. Caliber .50 Machine Gun, M87.*

## CHAPTER 2

### ORGANIZATIONAL MAINTENANCE INSTRUCTIONS

#### Section I. SERVICE UPON RECEIPT OF MATERIEL

##### 2-1. General

The procedures contained in table 2-1 will be observed by organizational maintenance when receiving new or rebuilt weapons and mounts before issuance to using troops.

*Table 2-1. Service Upon Receipt of Materiel*

Step	Action	Reference
1	Remove machine gun or tripod mount, and items from containers.	
2	Check for missing items. <i>Note.</i> Items must agree with Basic Issue Items List.	TM 9-1005-212-10 or pertinent vehicle operator's manual

*Table 2-1. Service Upon Receipt of Materiel—Continued*

Step	Action	Reference
3	Remove VCI bore tube from barrels.	
4	Field strip machine gun and inspect for: Missing parts Proper assembly	TM 9-1005-212-10 or pertinent vehicle operator's manual
5	Clean and lubricate, if necessary.	TM 9-1005-212-10 or pertinent vehicle operator's manual
6	Re-assemble <i>Note.</i> Install spare barrel assembly to make certain it locks securely.	
7	Adjust headspace.	TM 9-1005-212-10 or pertinent vehicle operator's manual
8	Function, using dummy cartridges.	

#### Section II. REPAIR PARTS, SPECIAL TOOLS AND EQUIPMENT

##### 2-2. Special Tools and Equipment

Refer to appendix B, section IV, for special tools and equipment that are required by organizational maintenance to maintain the machine gun and mount.

*Note.* Spare parts box 7148549 is issued only when the

Machine Gun, M1919A4 is used as vehicle armament. Spare parts box 7148550 is issued only with the Machine Gun, M37.

##### 2-3. Maintenance Repair Parts

Organizational repair parts are listed and illustrated in appendix B, section III.

#### Section III. LUBRICATION

##### 2-4. General

Refer to TM 9-1005-212-10 for lubrication of Machine Guns, M1919A4 and M1919A6 and

Tripod Mount, M2 and pertinent vehicle operator's manual for lubrication of Machine Gun, M37.

#### Section IV. PREVENTIVE MAINTENANCE CHECKS AND SERVICES

##### 2-5. General

Refer to table 2-2 for preventive maintenance

checks and services to be performed by organizational maintenance.

Table 2-2. Preventive Maintenance Checks and Services

Organizational Maintenance Category		Monthly Schedule (or quarterly)	
Sequence number	Item to be inspected	Procedure	Reference
	General condition	<p><i>Note.</i> During periods of inactivity perform preventive maintenance every 90 days unless inspection reveals more frequent servicing is necessary.</p> <p>Inspect protective coatings for effectiveness. Check for missing, loose, or damaged parts, tools, or equipment. Check to insure compliance with cleaning and lubrication instructions.</p>	TM 9-1005-212-10 or pertinent vehicle operator's manual

## Section V. TROUBLESHOOTING

### 2-6. General

a. Refer to table 2-3 for information useful in diagnosing and correcting unsatisfactory operation or failure of the machine gun and mount. Each malfunction stated is followed by a list of

probable causes. The corrective action recommended is described opposite the probable cause.

b. Malfunctions which may occur for operator and crew are listed in TM 9-1005-212-10 or pertinent vehicle operator's manual.

Table 2-3 Organizational Troubleshooting

Malfunction	Probable cause	Corrective action
	<b>Machine Gun</b>	<i>Note.</i> For malfunctions encountered but not listed, or if corrective action does not remedy condition, notify direct support maintenance.
1. Failure to feed	<p>a. Defective belt feed lever</p> <p>b. Defective extractor assembly</p> <p>c. Defective belt feed pawl spring</p> <p>d. Defective belt feed pawl</p> <p>e. Defective belt feed slide</p> <p>f. Defective belt holding pawl</p> <p>g. Defective belt holding pawl spring</p> <p>h. Defective cover latch spring</p> <p>i. Defective belt feed lever pin</p> <p>j. Defective extractor plunger or spring</p> <p>k. Defective extractor cam</p> <p>l. Defective cover latch</p> <p>m. Defective feed pawl</p>	<p>a. Replace</p> <p>b. Replace</p> <p>c. Replace</p> <p>d. Replace</p> <p>e. Replace</p> <p>f. Replace</p> <p>g. Replace</p> <p>h. Replace</p> <p>i. Replace</p> <p>j. Evacuate to direct support maintenance</p> <p>k. Evacuate to direct support maintenance</p> <p>l. Evacuate to direct support maintenance</p> <p>m. Replace</p>
2. Failure to chamber	<p>a. Defective T-slot</p> <p>b. Defective recoil plate</p> <p>c. Defective extractor feed cam</p>	<p>a. Replace bolt</p> <p>b. Replace bolt</p> <p>c. Evacuate to direct support maintenance</p>
3. Failure to lock	<p>a. Defective breech lock</p> <p>b. Defective breech lock cam</p> <p>c. Defective accelerator</p> <p>d. Defective T-lug stud</p>	<p>a. Evacuate to direct support maintenance</p> <p>b. Evacuate to direct support maintenance</p> <p>c. Evacuate to direct support maintenance</p> <p>d. Evacuate to direct support maintenance</p>

Table 2-3. Organizational Troubleshooting—Continued

Malfunction	Probable cause	Corrective action
4. Failure to fire	a. Defective firing pin b. Defective trigger c. Sear spring weak or broken d. Faulty engagement of firing pin and sear notch e. Defective firing pin spring f. Improper timing g. Defective barrel extension	a. Replace b. Replace c. Replace d. Replace e. Evacuate to direct support maintenance f. Evacuate to direct support maintenance g. Evacuate to direct support maintenance
5. Failure to unlock	a. Defective breech lock b. Faulty breech lock cam clearance	a. Evacuate to direct support maintenance b. Evacuate to direct support maintenance
6. Failure to extract	a. Defective T-slot b. Defective extractor	a. Replace breechbolt b. Replace
7. Failure to eject	a. Defective firing pin b. Defective ejector c. Defective ejector spring	a. Replace b. Evacuate to direct support maintenance c. Evacuate to direct support maintenance
8. Failure to cock	a. Defective cocking lever b. Defective firing pin sear notch c. Defective cocking lever pin d. Defective sear e. Defective sear spring	a. Replace b. Replace c. Replace d. Replace e. Replace
9. Uncontrolled automatic fire	a. Defective sear b. Defective trigger c. Defective firing pin	a. Replace b. Replace c. Replace
10. Failure to load	a. Defective belt holding pawl or spring b. Defective feed pawl or spring c. Defective belt feed lever Elongated firing pin hole	a. Replace b. Replace c. Replace Replace breechbolt
11. Ruptured primers		
12. Sluggish operation	a. Improper timing b. Burred parts Tripod Mount	a. Evacuate to direct support maintenance b. Remove burrs
1. Failure to traverse	a. Defective traversing handwheel b. Defective traversing and elevating mechanism assembly	a. Evacuate to direct support maintenance b. Evacuate to direct support maintenance
2. Machine gun not secured to mount	a. Defective quick release pin b. Defective pintle lock c. Defective traversing and elevating mechanism assembly d. Defective tripod mount pintle	a. Evacuate to direct support maintenance b. Evacuate to direct support maintenance c. Evacuate to direct support maintenance d. Evacuate to direct support maintenance
3. Legs fail to stay open or locked	a. Defective sleeve latch b. Defective sleeve lock spring	a. Evacuate to direct support maintenance b. Evacuate to direct support maintenance

## Section VI. ORGANIZATIONAL MAINTENANCE PROCEDURES

**2-7. General**

Inspect components for rust, corrosion, burrs, scored areas or foreign matter and remove. Inspect springs for deformation and replace if necessary. Inspect for damage to threads of screws, bolts, and other components. Inspect for appearance, proper assembly and functioning. Repair or replace unserviceable parts as authorized.

*Note.* Maintenance of some groups and assemblies are not authorized by the maintenance allocation chart (app C) to organizational maintenance. Insure that no work is being accomplished beyond the scope authorized to organizational maintenance. Evacuate to direct and general support maintenance for repairs when necessary.

**2-8. Removal/Installation of Major Groups and Assemblies**

Refer to TM 9-1005-212-10 for procedures on removal and installation of major groups and assemblies of Caliber .30 Machine Guns, M1919A4 and M1919A6 and Tripod Mount, M2. Instructions for Caliber .30 Machine Gun, M37 are contained in the pertinent vehicle operator's manuals.

**2-9. Disassembly/Assembly of Major Groups and Assemblies**

Disassemble/assemble in accordance with illustrations in appendix B. Refer to figure 2-1 for use of socket wrench 6147277 to remove barrel bearing from Machine Guns, M1919A6 and M37.

**2-10. Cleaning, Inspection and Repair***a. Cleaning.*

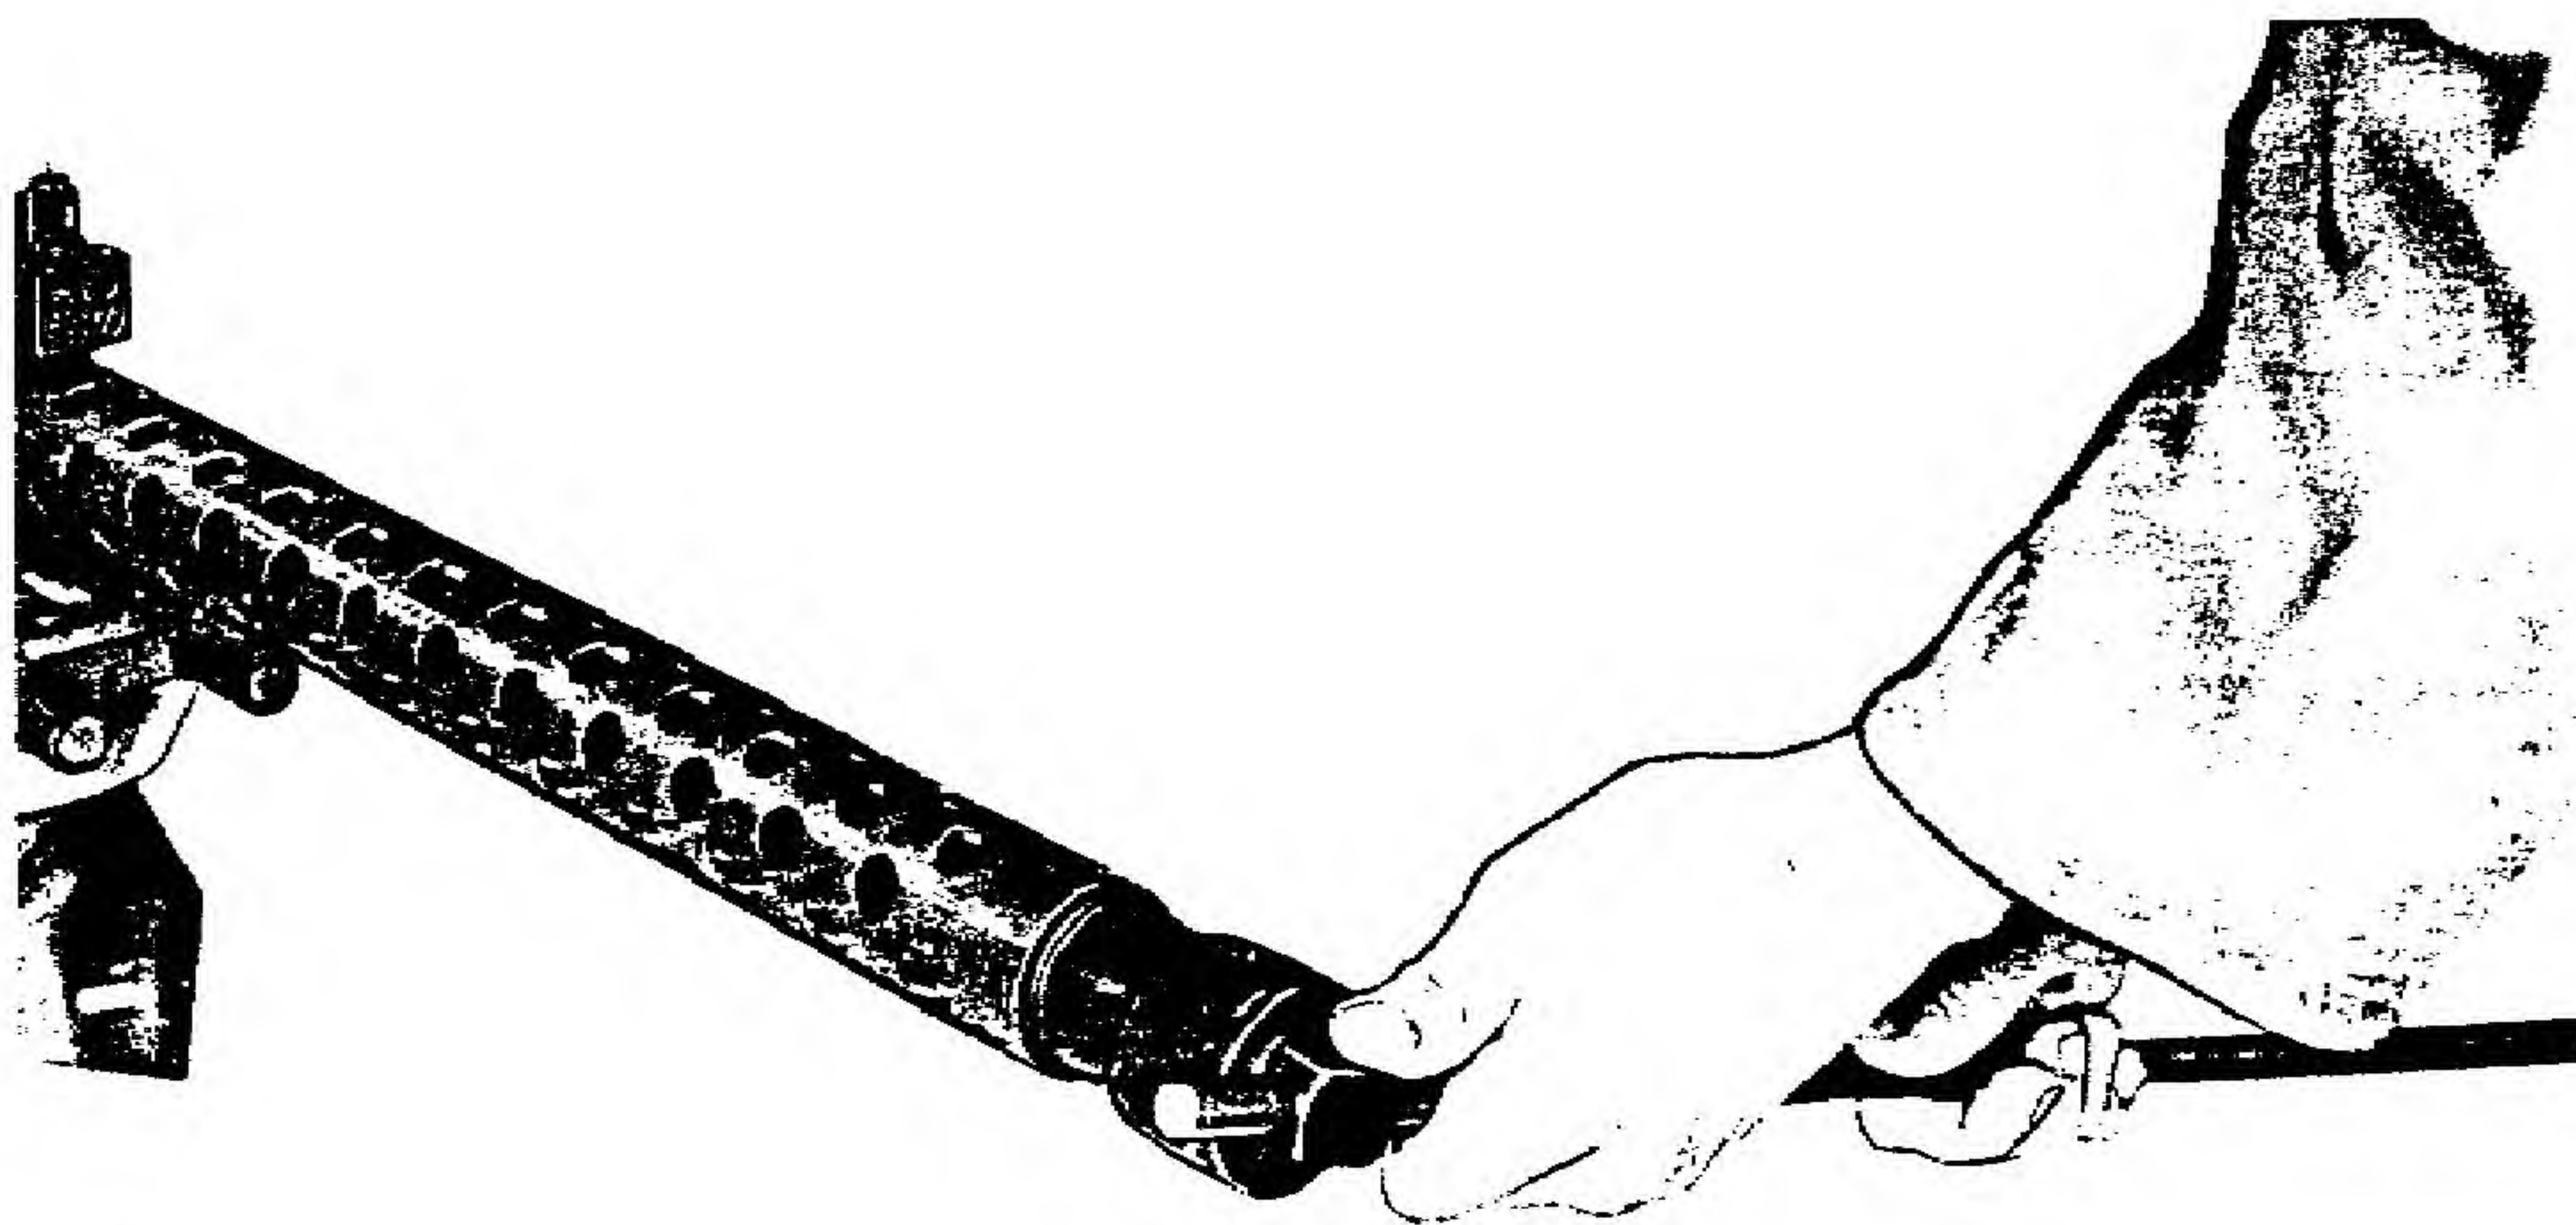

*Note.* During periods of inactivity, clean and lubricate every 90 days unless inspection reveals more frequent servicing is necessary.

(1) Refer to TM 9-1005-212-10 for a list of cleaning materials used in conjunction but not issued with this equipment.

(2) For specific cleaning instructions on Machine Guns, M1919A4 and M1919A6, and Tripod Mount, M2, refer to TM 9-1005-212-10.

(3) Refer to the pertinent vehicle operator's manual for instructions on cleaning Machine Gun, M37.

(4) On component parts which contain a hard carbon residue it may be necessary to clean

WE 61340

Figure 2-1. Use of socket wrench.

those parts with carbon removing compound, 6856-965-2332 (P-C-111). Depending on the amount of carbon residue, soak 2 to 16 hours, rinse with water and dry cleaning solvent (SD), brush with a stiff bristle brush, wipe the parts dry and lubricate.

**Warning.** Avoid skin contact with P-C-111.

The compound should be washed off thoroughly with running water if it comes in contact with the skin. A good lanolin base cream, after exposure to compound, is helpful. The use of rubber gloves and protective equipment is recommended.

*b. Inspection and Repair.* Refer to table 2-4.

Table 2-4. Organizational Maintenance Procedures

Group or assembly	Inspection	Repair	Reference
Machine Gun	<b>Warning.</b> Before starting an inspection, be sure to clear the weapon. Do not actuate the trigger until the weapon has been cleared. Inspect the chamber to insure that it is empty, and check to see that no ammunition is in position to be introduced.	Replace items 2, 3, 7, 8, 9, 17, 20, and 23, fig. B-1 and items 1, 2, 3, 4, 8, and 9, fig. B-5 if necessary. Evacuate to direct support maintenance.	Fig B-3
Shoulder gun stock group (M1919-A6 only)	Inspect to assure stock is secure. Nut on clamp must turn freely. Check clamp and wing nut for damaged threads. Inspect stock body for cracks.		
Back plate assembly	Adjusting screw must be tight, not below flush, or protruding more than 1 1/2 threads, slot either vertical or horizontal. Headless shoulder pin must be seated in its recess when adjusting screw is tight. Back plate assembly must be capable of being latched securely and must be free enough to be removed by hand. Check trigger safety (M37 only) for proper functioning.	Replace, if necessary. Evacuate to direct support maintenance for repair.	2, fig. B-1 1, fig. B-5
Bolt group (M1919A4 and M1919A6 only) and Driving spring assembly and bolt group (M37 only)	The ejector should return to neutral position when pulled to the side and released. Firing pin point should be smooth and well rounded. Firing pin should move freely in the bolt group. Sear should work smoothly in the guideways without binding. The angle on mating surface that engages the firing pin will be sharp without a feather edge. Driving spring for M1919A4 and M1919A6 must have a free length of 15 1/4 to 16 1/4 inches.	Replace items 1, 7 thru 11, 15, 17, and 18, fig. B-6 and items 5, 13 thru 17, 21, 22, and 23, fig. B-7, if necessary.	
Lock frame group	Headless shoulder pin (lock frame pin) must move freely under spring tension. Trigger cams must be free of distortion.	Replace items 1 and 3 thru 7, fig. B-8, if necessary.	
Barrel extension group	Breech lock will function freely with a minimum of looseness in its slot and forward beveled edges will be free from damage. Barrel locking spring must prevent rotation of the barrel/barrel assembly during firing of the weapon.	Replace items 1 and 3, fig. B-9, if necessary.	
Barrel/barrel assemblies	Inspect for pits large enough to cause extraction difficulties. Pits must not	Replace, if necessary.	7 and 8, fig. B-1 and 8, fig. B-

Table 2-1. Organizational Maintenance Procedure—Continued.

Group or assembly	Inspection	Repair	Reference
Cover group (M1919A4 and M1919A6)	be greater than the width of a land or groove or more than 3/8 inch in length. Cover will be held open by function cover catch assembly. The cover will operate freely in its travel. Functional components will operate freely. Cover latch will hold cover and back plate assembly securely.	Replace items 1 thru 5 and 7 thru 12, fig. B-10, if necessary.	
Cover group (M37 only)	Cover will be held open by function of cover detent panel. The cover will operate freely in its travel. Functional components must operate freely. Cover latch will hold cover and back plate assembly securely.	Replace items 1 thru 8 and 10 thru 13, fig. B-11, if necessary.	
Flash hider group (M1919A4 and M1919A6 only)	Check flash hider for carbon and for binding when assembled to front barrel bearing. Check clip assembly for looseness and set.	Evacuate to direct support maintenance for necessary repair.	18 and 19, fig. B-1
Bipod assembly (M1919A6 only)	Check for damaged threads and for missing or damaged components. Thumb screws must secure legs firmly.	Evacuate to direct support maintenance for necessary repair.	21, fig. B-1
Carrying handle assembly (M1919A4 and M1919A6 only)	Inspect for cracked or splintered handle and damaged threads. Body must be secure to barrel jacket when tight.	Replace, if necessary. After assembling to machine gun, stake screw MS 90725-6 (3, fig. B-13) <i>slightly</i> over nut. Evacuate to direct support maintenance for necessary repair.	23, fig. B-1
Casing and barrel jacket group	Elevation and windage screws must function freely. Front sight must be in alignment. Blade must be securely fastened in place. Barrel jacket must not cause binding of barrel/barrel assembly in front barrel bearing. Barrel jacket must be held securely to casing by machine screw.	Replace items 12, 20, 22, 23, and 24, fig. B-14 and items 12, 17, 18, 19, 21, 26, and 29, fig. B-15 if necessary.	
Tripod Mount			
Traversing and elevating mechanism assembly	Check to assure mechanism traverses and elevates properly.	Replace items 2, 3, and 6, fig. B-18, if necessary.	
Head and leg groups	Check to assure head and leg groups can be secured.	Replace items 1, 2, and 3, fig. B-19, if necessary.	

## CHAPTER 3

### DIRECT SUPPORT, GENERAL SUPPORT, AND DEPOT MAINTENANCE INSTRUCTIONS

#### Section I. REPAIR PARTS, SPECIAL TOOLS AND EQUIPMENT

##### 3-1. Special Tools and Equipment

Special tools and equipment required by maintenance to perform the repair operations described in this manual are listed and illustrated in appendix B.

##### 3-2. Repair Parts

Direct support, general support, and depot maintenance repair parts are listed and illustrated in appendix B.

#### Section II. TROUBLESHOOTING

##### 3-3. General

a. Refer to table 3-1 for troubleshooting procedures for direct support and general support

maintenance.

b. Refer to table 2-3 for organizational troubleshooting procedures.

*Table 3-1. Direct and General Support Troubleshooting*

Malfunction	Probable cause	Corrective action
	<i>Machine Gun</i>	
1. Failure to feed	a. Defective extractor cam b. Defective extractor plunger or spring c. Defective cover latch	a. Replace b. Replace c. Replace
2. Failure to chamber	Defective extractor feed cam	Replace
3. Failure to lock	a. Defective breech lock b. Defective breech lock cam c. Defective accelerator d. Defective T-lug stud	a. Replace b. Replace c. Replace d. Replace barrel extension
4. Failure to fire	e. Defective driving spring assembly a. Defective firing pin spring or firing pin b. Improper timing c. Defective barrel extension	e. Replace a. Replace b. Adjust timing c. Replace
5. Failure to unlock	a. Defective breech lock b. Faulty breech lock cam clearance	a. Replace b. Adjust
6. Failure to eject	a. Defective ejector b. Defective ejector spring c. Deformed T-slot	a. Replace b. Replace c. Replace barrel extension
7. Sluggish operation	Improper timing	Time correctly
	<i>Tripod Mount</i>	
1. Failure to traverse	Defective traversing and elevating mechanism assembly	Repair or replace
2. Machine gun not secured to mount	a. Defective quick release pin b. Defective pintle lock c. Defective traversing and elevating mechanism assembly d. Defective tripod mount pintle	a. Repair or replace b. Repair or replace c. Repair or replace d. Replace
3. Legs fail to stay open or locked	a. Defective sleeve latch b. Defective sleeve lock spring	a. Repair or replace b. Replace

## Section III. PREEMBARKATION INSPECTION OF MATERIEL IN UNITS

## ALERTED FOR OVERSEAS MOVEMENT

## 3-4. General

This section provides specific instructions for guidance during inspection by direct and general support personnel of materiel in alerted units scheduled for oversea duty. Inspection is made for the purpose of:

- a. Determining serviceability.
- b. Recognizing conditions that would cause failure.
- c. Assuring proper maintenance at prescribed levels.
- d. Determining the ability of a unit to accomplish its maintenance and supply mission.

## 3-5. Inspection Procedures

**Warning.** Before starting and inspection, be sure to clear the weapon. **DO NOT** actuate the trigger until the weapon has been cleared. Inspect the chamber to insure that it is empty, and check to see that no ammunition is in position to be introduced.

- a. Exercise judgment regarding degree of inspection of integral parts within assemblies.
- b. Refer to TB 9-1000-247-35 and table 3-2 for inspection criteria.

Table 3-2. Preembarkation Inspection

Item	Inspection criteria
<i>Machine gun</i>	
Breech bore unlined barrels	Preembarkation—Maximum 0.304 inch (Use gage 5564343.)
Barrel erosion for lined barrels	Use barrel erosion kit 5910297. Refer to TM 9-4933-208-34.
Bolt group	Recoil plate will be flush

Table 5-2. Preembarkation Inspection—Continued

Item	Inspection criteria
Firing pin hole	with face of bolt and firmly seated. Maximum 0.081 inch (Use gage 5077203.) Elongation of hole is also a cause for rejection.
Firing pin	Minimum 0.060 inch Maximum 0.068 inch (Use gage 7319929.)
Bottom plate group	Breech lock can will float slightly.
Back plate	Buffer plate must have a 3/16 inch projection. Adjusting screw will be flush or not protrude more than 1 1/2 threads beyond end of buffer tube. Slot either vertical or horizontal.
Trigger pull	Minimum 7 pounds Maximum 12 pounds (Use fixture 7274758.)
Timing	Minimum 0.030 inch Maximum 0.120 inch (Use gage 7319928.)
<i>Mount</i>	
Leg and head group	The distance between sleeve and collar is not to be less than 1/4 or more than 1/2 inch before locking.
Clearance between pintle shoulder and tripod head	Minimum clearance 0.003 inch.
Elevating and traversing mechanism assembly	Indicators on handwheel and elevating scale plate of the upper elevating screw must coincide at "0" reading.

## Section IV. GENERAL MAINTENANCE

## 3-6. General

This section provides instructions on general maintenance procedures to be used by direct and general support maintenance in maintaining the machine gun and mount.

## 3-7. General Maintenance Repair Methods

## a. Disassembly and Assembly Procedures.

- (1) In disassembling the machine gun or mount, remove the major groups and assemblies.

(Refer to figures B-1, B-2, B-18, B-19, T1 9-1005-212-10 and pertinent vehicle operator's manual.) Groups and assemblies may be disassembled, as necessary, into individual parts.

(2) Complete disassembly of a unit is not always necessary in order to make a required replacement or repair. Good judgment should be exercised to keep disassembly and assembly operations to a minimum.

(3) During assembly, assemblies and groups should be assembled first, then installed.

to form a complete unit. Lubricate sliding surfaces before assembly.

*b. Replacement of Parts.*

(1) Parts will be replaced when unserviceable.

(2) When assembling a unit, replace pins and cotter pins, if available. If screws, nuts, washers, and retainers are damaged they will be replaced.

(3) All springs will be replaced if they are broken, kinked, deformed, fail to function properly, or fail to meet specific requirements.

(4) If a new part is not available, a reconditioned part may be substituted. Such reconditioned parts should be examined carefully to determine their serviceability.

## **Section V. REPAIR INSTRUCTIONS FOR MACHINE GUNS**

### **3-8. Specific Repair Instructions**

For specific repair instructions of the machine gun refer to table 3-3.

Table 3-3. Direct and General Support Maintenance Procedures For Machine Gun

Group or assembly	Disassembly/assembly	Inspection	Repair	Tests and adjustments
		<b>Warning.</b> Before starting an inspection, be sure to clear the weapon. Do not actuate the trigger before the weapon has been cleared. Inspect the bore and chamber to insure that it is empty and free from obstructions. Check to see that no ammunition is in position to be introduced.		
Machine gun	Figs B-1 and B-2	Visually inspect machine gun for general appearance.	Refinish components as necessary. Repair or replace unserviceable components.	Check timing; use gage 7319928. Refer to figures 3-1 and 3-2.  Check trigger pull, maximum 12 lb, minimum 7 lbs. Use fixture 7274758.
Shoulder gun stock group (M1919A6 only)	Fig B-3	Check clamp and wing nut for damaged threads. Check clamping groups for locking action. Inspect stock body for cracks.	Replace items 1 and 2, figure B-3, if necessary.	
Back plate assembly	Figs B-4 and B-5 Back plate assembly should fit firmly in the casing and barrel jacket group, but should be free enough to be removed by hand.	Adjusting screw must be tight. Headless shoulder pin will be seated in its recess when adjusting screw is tight. Buffer disks will be free from burrs and tears and edges must be smooth.  Back plate assembly should fit firmly in the receiver but must be free enough to be removed by hand.	Replace items 1 thru 8, figure B-4 and items 1 thru 15 except 9 and 10, figure B-5, if necessary.	Adjusting screw must not be below flush, or protruding more than 1 1/2 threads, slot either vertical or horizontal. Adjusting screw must be tightened to 22-26 ft. lbs. torque.  Buffer plate must have a 3/16 inch projection.
Bolt group (M1919A4 and M1919A6) and driving spring assembly and bolt group (M37 only)	Figs B-6 and B-7	All components should be free of sharp corners and burrs. The ejector should return to neutral position when pulled to the rear and released. Firing pin point should be smooth and well rounded.	Replace items 1 thru 18 except 6, 14, and 16, figure B-6 and items 1 thru 23 except 12 and 20, figure B-7, if necessary. Pin (2, fig B-6) must be staked at both ends.	Check firing pin protrusion: minimum 0.060 inch to maximum 0.068 inch. Use gage 7319929 (figures 3-3 and 3-4).  Check firing pin hole: maximum 0.081 inch. Use gage 5077203 (figures 3-5 and 3-6).

Table 3-3. Direct and General Support Maintenance Procedures For Machine Gun—Continued

Group or assembly	Disassembly/assembly	Inspection	Repair	Tests and adjustments
Bolt group— Continued				Driving spring of M1919A4 and M1919A6 must have free length of 15-1/4 to 16-1/4 inches. Driving spring for M37 must have free length of 12-1/2 to 13-1/2 inches.
Lock frame group	Fig B-8	<p>Firing pin should move freely in the bolt group. Sear should work smoothly in the guideways without binding. The angle on mating surfaces that engages the firing pin will be sharp without a feather edge. Check the driving spring assembly for deformation and proper functioning.</p> <p>Check to assure there is no binding between accelerator and depressors. Accelerator lugs are to free of deformation affecting functional parts. Lock frame depressors are to work freely in the barrel extension. the guide pin on barrel extension plunger will be free from damage and/or distortion. The lock frame guides will be tight and free of damage. Headless shoulder pin (lock frame pin) will move freely under spring tension. The trigger cams will be free of distortion and burs.</p>	Replace items 1 thru 8, figure B-8, if necessary.	
Barrel extension group	Fig B-9	<p>Barrel extension will be free of sharp edges and burs. Breech lock will function freely with aluminum of looseness in its slot, and forward beveled edges will be free from damage. Barrel locking spring must prevent rotation of the barrel/barrel assembly during firing of the weapon</p>	Replace items 1 thru 4, figure B-9, if necessary.	
Barrel/barrel assemblies	7 and 8, fig B-1, and 8, fig B-2	Barrel/barrel assemblies will pass a visual inspection. They must be clean and free of corrosion. For standards of serviceability refer to paragraph 3-9.	Replace items 7 and 8, figure B-1 and item 8, figure B-2, if necessary.	Para 3-9

Table 3-3. Direct and General Support Maintenance Procedures For Machine Gun—Continued

Group or assembly	Disassembly/assembly	Inspection	Repair	Tests and adjustments
Cover assembly	Figs B-10 and B-11	Cover assembly will be held open by function of cover catch assembly, on M1919A4 and M1919A6 and by cover detent on M37. The cover assembly will operate freely when opening and closing. Functional components will operate freely. Cover latch will hold cover assembly and back plate assembly securely.	Replace items 1 thru 13, figure B-10 and items 1 thru 19 except 16 and 18, figure B-11, if necessary.	
Flash hider group (M1919A4 and M1919A6 only)	18 and 19, fig B-1	Check flash hider for carbon and for binding when assembled to front barrel bearing. Check clip assembly for looseness or set.	Replace items 16 thru 20, figure B-1, if necessary.  Refer to figure 3-7 for procedures for removing hard carbon residue with carbon removing reamer assembly.	
Bipod assembly (M1919A6 only)	Fig B-12	Check for bent or stripped screw threads and stripped screw holes. Check legs for damaged or missing components. Thumb screws must secure legs firmly.	Replace items 1 thru 9, figure B-12, if needed. Screw (7, fig -12) must be staked heavily.	
Carrying handle assembly (M1919A4 and M1919A6 only)	Fig B-13	Check for damaged or missing parts. Inspect handle for cracks or splintering.	Replace items 1 thru 6, figure B-13, if necessary.	
Casing and barrel jacket group	Figs B-14, B-15, B-16 and B-17	Inspect in accordance with standards in paragraph 3-10.	Replace items 1 thru 9, 12, 15 thru 24, and 30 thru 32, figure B-14, if necessary. Replacement of items 15 and 16 is restricted to general support maintenance. Replace items 1 thru 9, 12, 14 thru 26, 28 thru 32 and 34 thru 36, fig B-15 if necessary. Replacement of item 28 is restricted to general support maintenance. For repair of front sight group replace items 1 thru 11 except 8, figure B-16	

Table 3-3. Direct and General Support Maintenance Procedures For Machine Gun—Continued

Group or assembly	Disassembly/assembly	Inspection	Repair	Tests and adjustments
Casing and barrel jacket group—continued			<p>as necessary. For repair of retracting bar group replace items 1 thru 8, figure B-17 as necessary.</p> <p>Body (11, fig B-16) must be staked into screw (12, fig B-14 and 12, fig B-15) and screw (1, fig B-16).</p> <p>Shoulder bolt (1 fig B-16) will be staked lightly in two places, 180 degrees apart.</p> <p>Barrel bearing lock (17, fig B-1 and 26, fig B-15) will be staked into the notches of the barrel jacket and barrel bearing. Choose notch which eliminates possibility of slot and bearing hole being adjacent.</p> <p>Barrel jacket must be staked into slot of screw (14, fig B-14 and 27, fig B-15) in two places.</p> <p>Screw (18, fig B-14 and 23, fig B-15) must be drawn up tight, backed off 1/6 to 1/4 turn, and staked in two places on breech lock cam (19, fig B-14 and 24, fig B-15).</p> <p>Stop, short round, front cartridge (21, fig B-14) must be staked into slots of stop, short round (20, fig B-14) in two places.</p> <p>Rivet (30, fig B-14 and 34, fig B-15) must be ground flush inside and outside.</p>	

### 3-9. Serviceability Standards for Barrels/ Barrel Assemblies

Barrels of barrel assemblies will pass a visual inspection utilizing a gun barrel reflector (figure 3-8). They must be clean and free of corrosion. The following standards of serviceability are applicable:

a. Pits in the chamber ARE allowable if they are not large enough to cause extraction difficulties.

b. Pits greater than the width of a land or groove and more than three-eighths inch in length ARE cause for rejection.

c. Scattered or uniformly fine pits or fine pits in a densely pitted area ARE allowable.

d. Tool marks or scratches are acceptable regardless of length. These marks will appear as lines running laterally in the grooves or may run spirally across the top of the lands.

e. Definitely ringed bores or bores ringed sufficiently to bulge the outside surface of the barrel or barrel assembly ARE cause for rejection.

f. Lands that appear dark due to coating of gilding metal from projectiles should NOT be cause for rejection.

g. Stellite lined barrel assemblies can be identified by a gap, located at the junction of the liner and the tube. Presence of this gap is NOT cause for rejection.

h. Serrations will be well defined so as to retain barrel/barrel assembly in its setting by the locking spring.

i. Barrels will be rejected when reject limit on breech bore gage is reached (figure 3-9).

j. Refer to TM 9-4933-208-34 for use of the barrel erosion gage on barrel assemblies.

**Caution.** Never attempt to check or gage a "hot" barrel or barrel assembly.

### 3-10. Serviceability Standards for Casing and Barrel Jacket Group

#### a. Casing Group.

(1) Steel trunnion block will NOT be cracked or severely damaged (figure 3-10). Chrome plated trunnion blocks are preferred for Machine Guns, M1919A6 and M37. Weapons with unplated trunnion block will not be replaced unless grooves (damaged areas) exceed 0.010 inch in depth (figure 3-11) measured from the adjacent flat surface. Serviceability of chrome plated trunnion blocks with evidence of chipped plate in areas that may affect feeding of the weapon will be governed by criteria indi-

cated in figures 3-12 and 3-13. Chrome flaking caused by feathered edges will NOT make weapon unserviceable. Chrome plated trunnion blocks are easily identified by the aluminum colored appearance of the top rear flat surface.

(2) The side plate assembly will be straight and will have no sharp corners. Bolt handle will not bind against any portion of the slot in side plate.

(3) Top plate group will not be bulged and will be free of dents. Cocking lever operating slot will be smooth with edges free of burrs and sharp corners.

(4) The bottom plate group will be straight and tightly riveted.

(5) The sight bracket will fit tight and be free of distortion. Component parts of the rear sight will not be distorted so as to interfere with functioning. Elevation and windage screws will function freely. The front sight will be in alignment and free from distortion. The blade will be securely fastened in place. Front sight will raise and lower without binding but will not fit loosely on the machine gun.

(6) Rivets must not be loose. The rivets in the receiver are not considered "loose" until there is perceptible movement between components, interference with functioning of the weapon, or possibility of the loss of the rivet. To determine the extent of loose rivets, try to insert a 0.001 inch feeler gage between the riveted components, top and bottom plate. The feeler gage must go between the riveted components for their entire length before the rivets are loose enough for turn-in of the weapon as unserviceable. Entrance of the gage at one point only is not cause for rejection.

(7) Receivers that will accept 0.010 inch feeler gage freely and without bind between side plates and trunnion will be rejected. However, those receivers that accept the 0.010 inch feeler gage freely in the area 1 inch from rear end of the trunnion will be acceptable.

(8) Markings must be legible.

b. *Barrel Jacket Group.* The barrel jacket will not be damaged so as to cause binding of the barrel assembly in the front barrel bearing. The barrel jacket will be held securely to the receiver by the machine screw.

c. *Retracting Bar Guide Group (M37 Only).* The retracting bar guide spacer should be firmly secured to the casing assembly. Check for missing or damaged components. If locking wire is broken or missing, replace. The retracting bar lock should function freely.

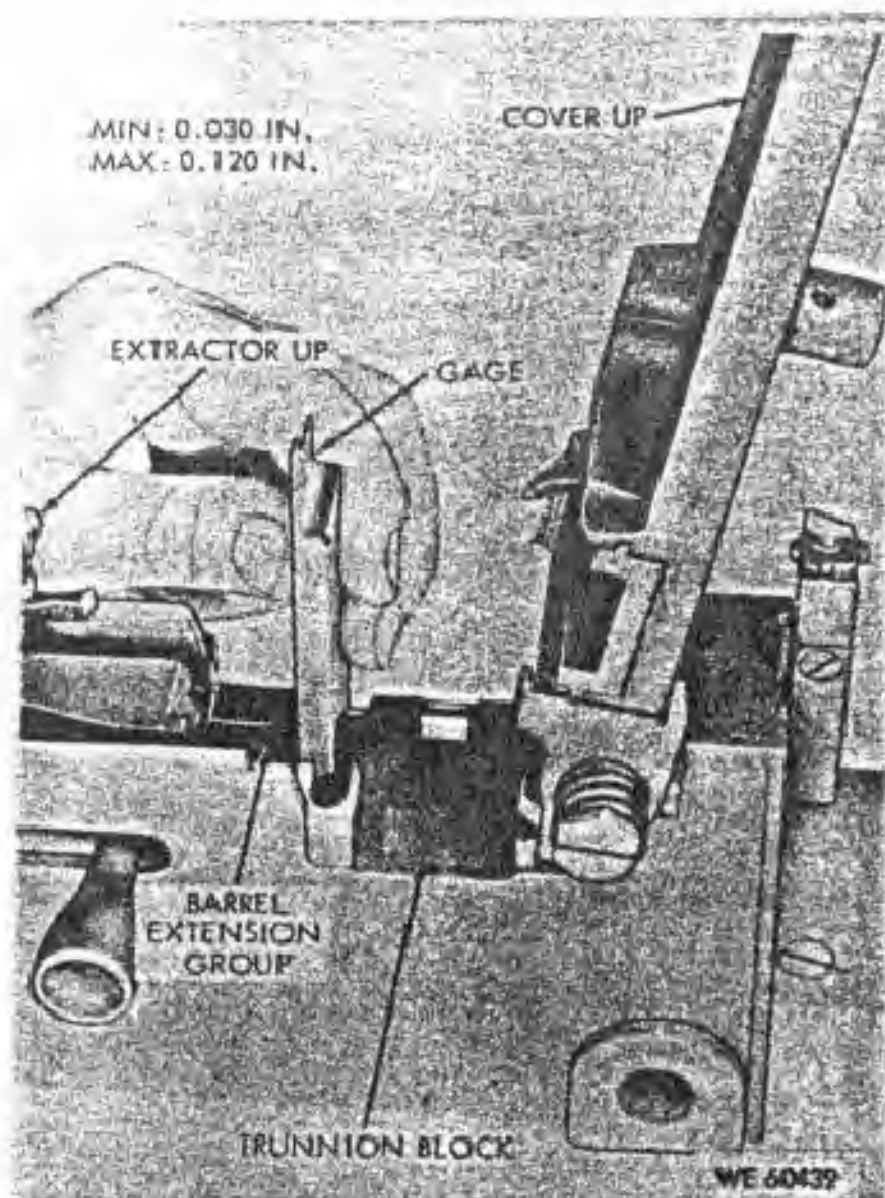

Figure 3-1. Maintenance procedures to determine serviceability of timing for Machine Guns, M1919A4 and M1919A6.

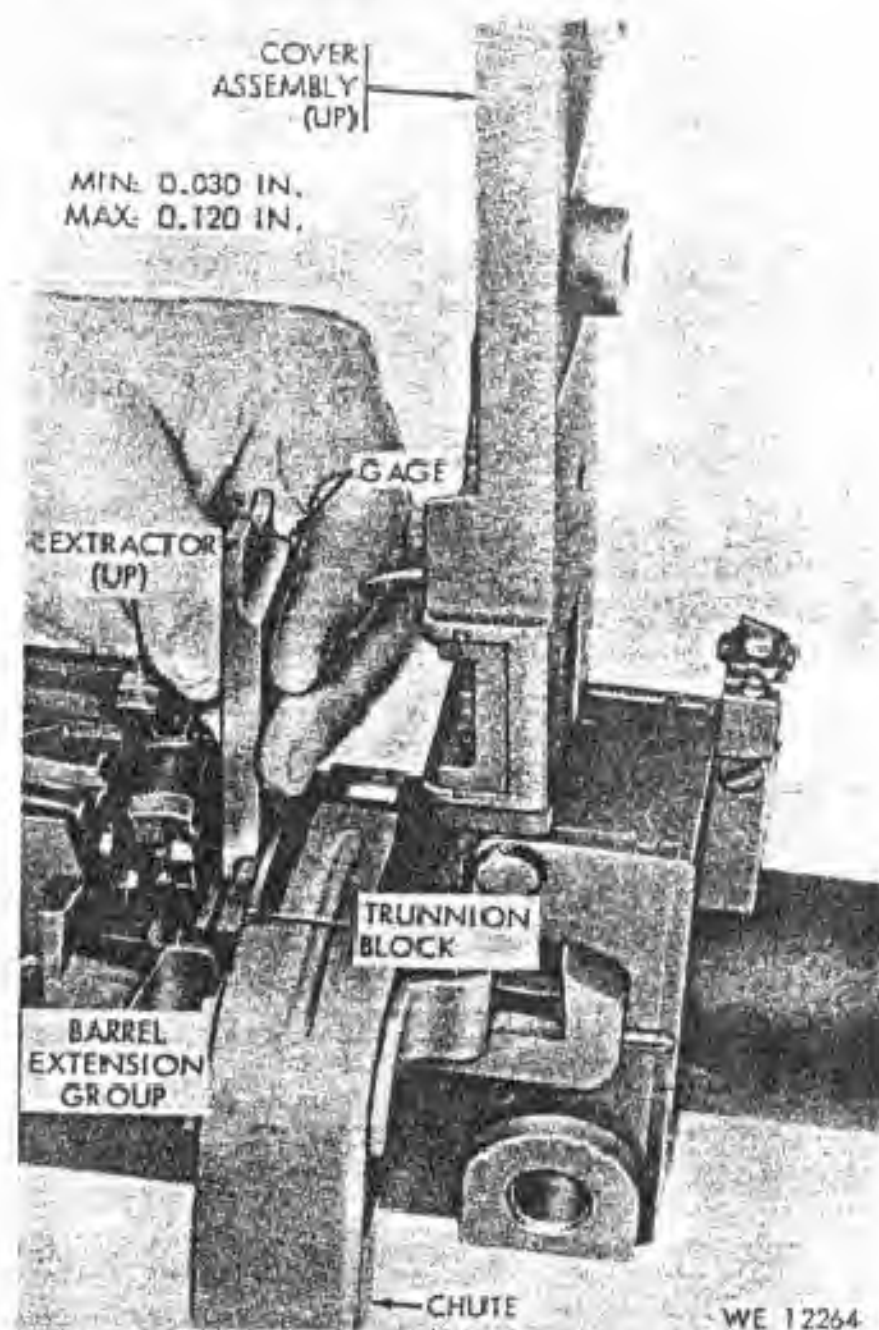

Figure 3-2. Maintenance procedures to determine serviceability of timing for Machine Gun, M37.

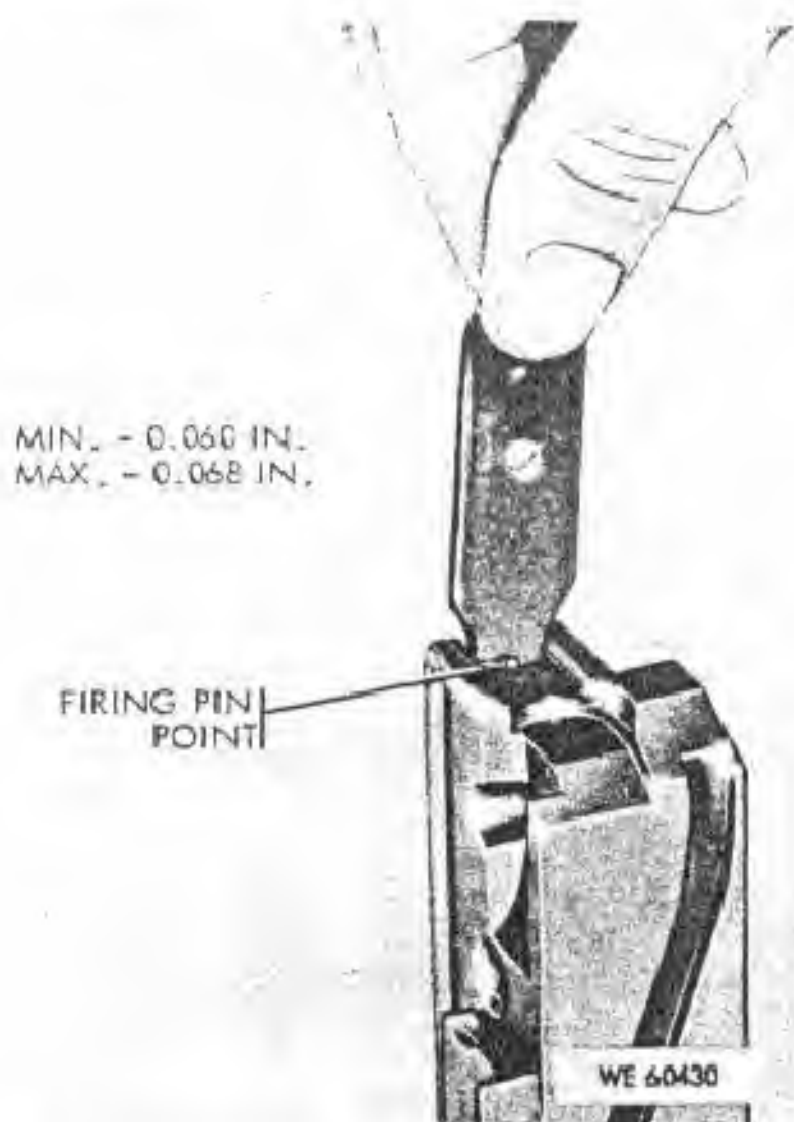

Figure 3-3. Maintenance procedures to determine serviceability of firing pin protrusion for Machine Guns, M1919A4 and M1919A6.

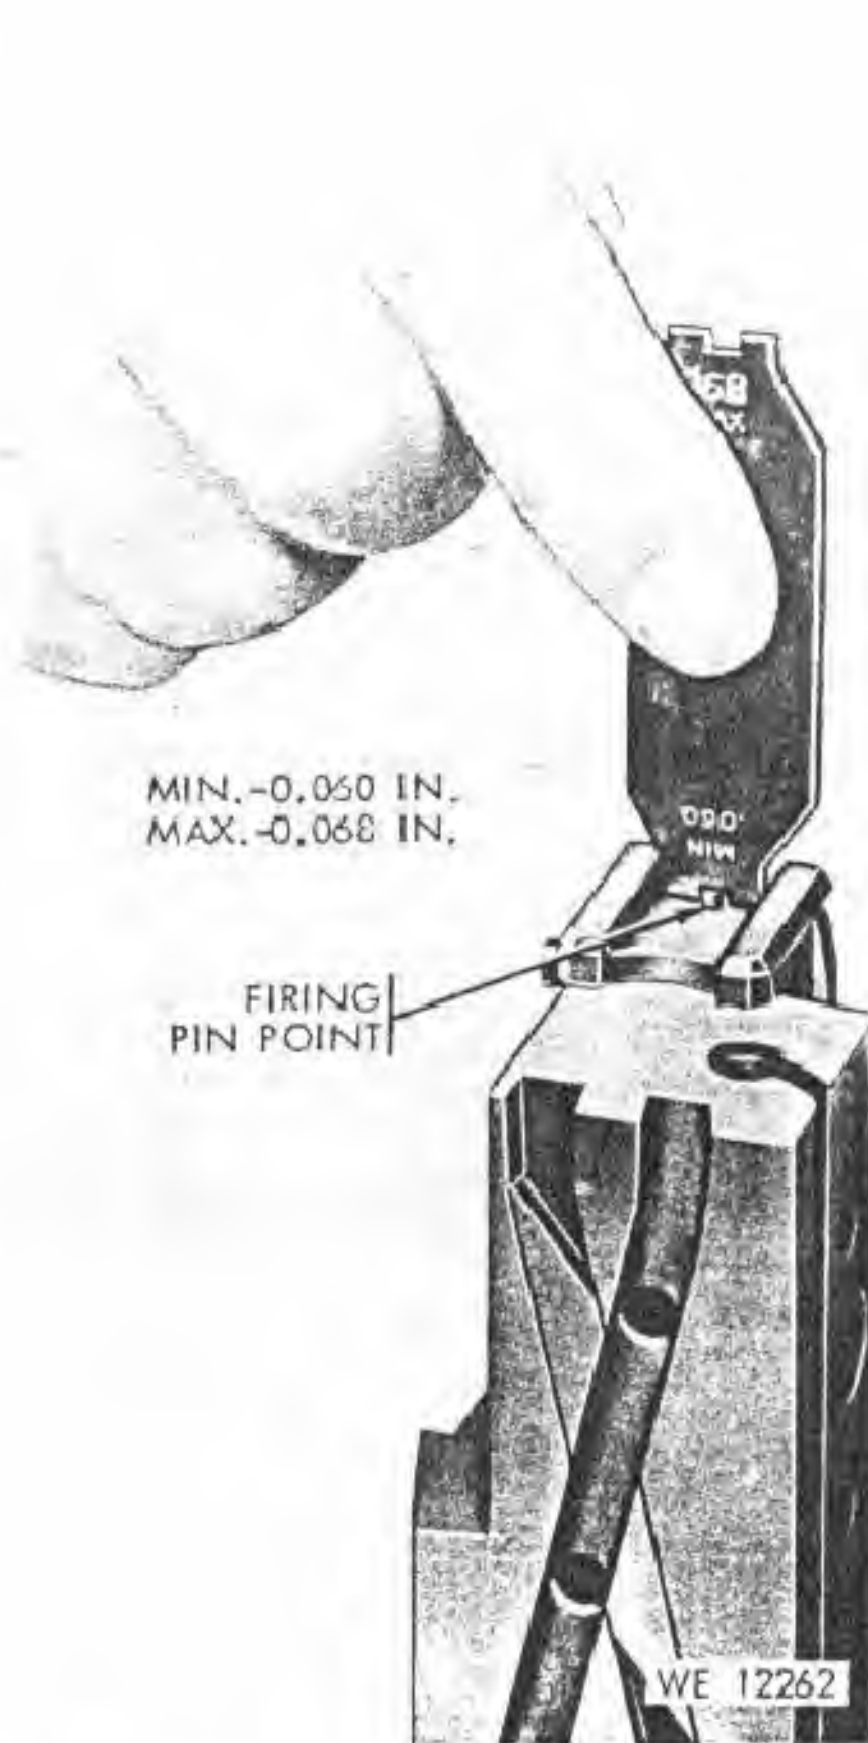

Figure 3-4. Maintenance procedures to determine serviceability of firing pin protrusion for Machine Gun, M37.

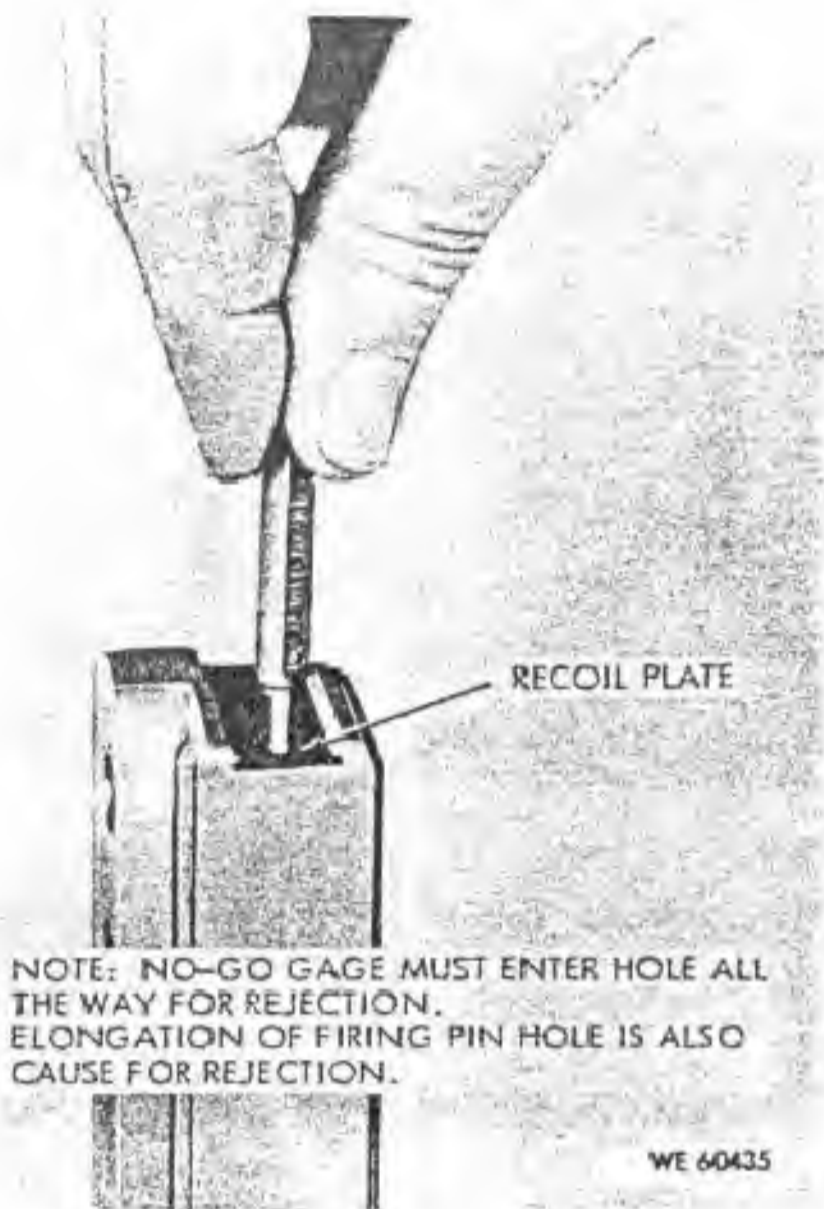

Figure 3-5. Maintenance procedures to determine serviceability of firing pin hole for Machine Guns, M1919A4 and M1919A6.

NOTE: NO GO GAGE MUST ENTER HOLE ALL THE WAY FOR REJECTION. ELONGATION OF FIRING PIN HOLE IS ALSO CAUSE FOR REJECTION.

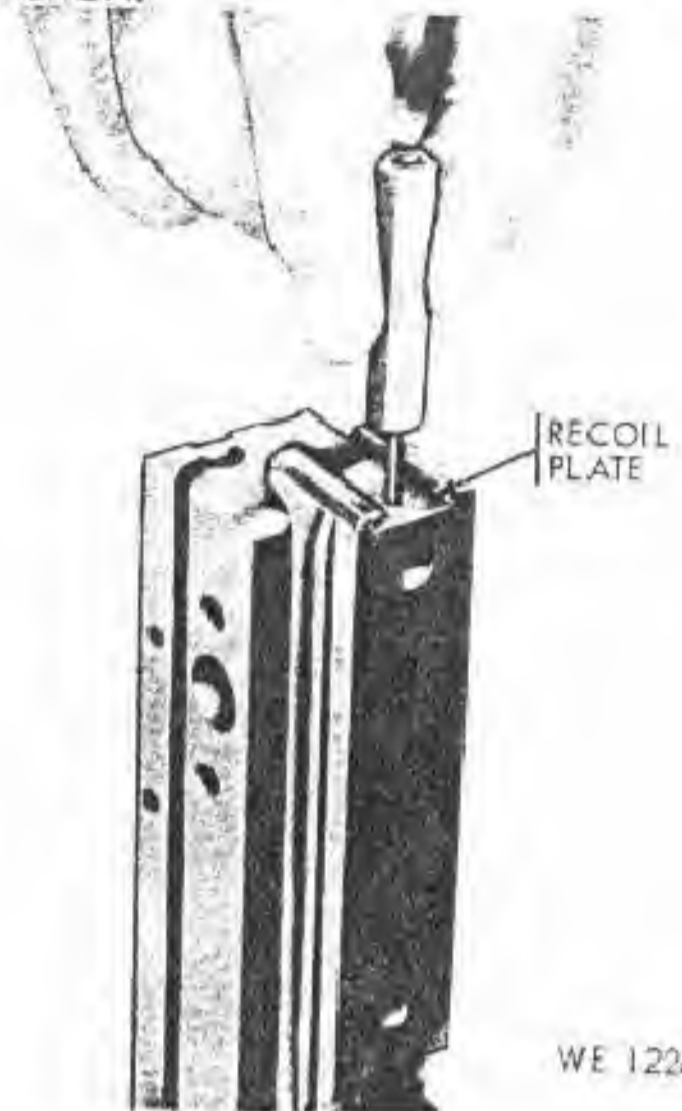

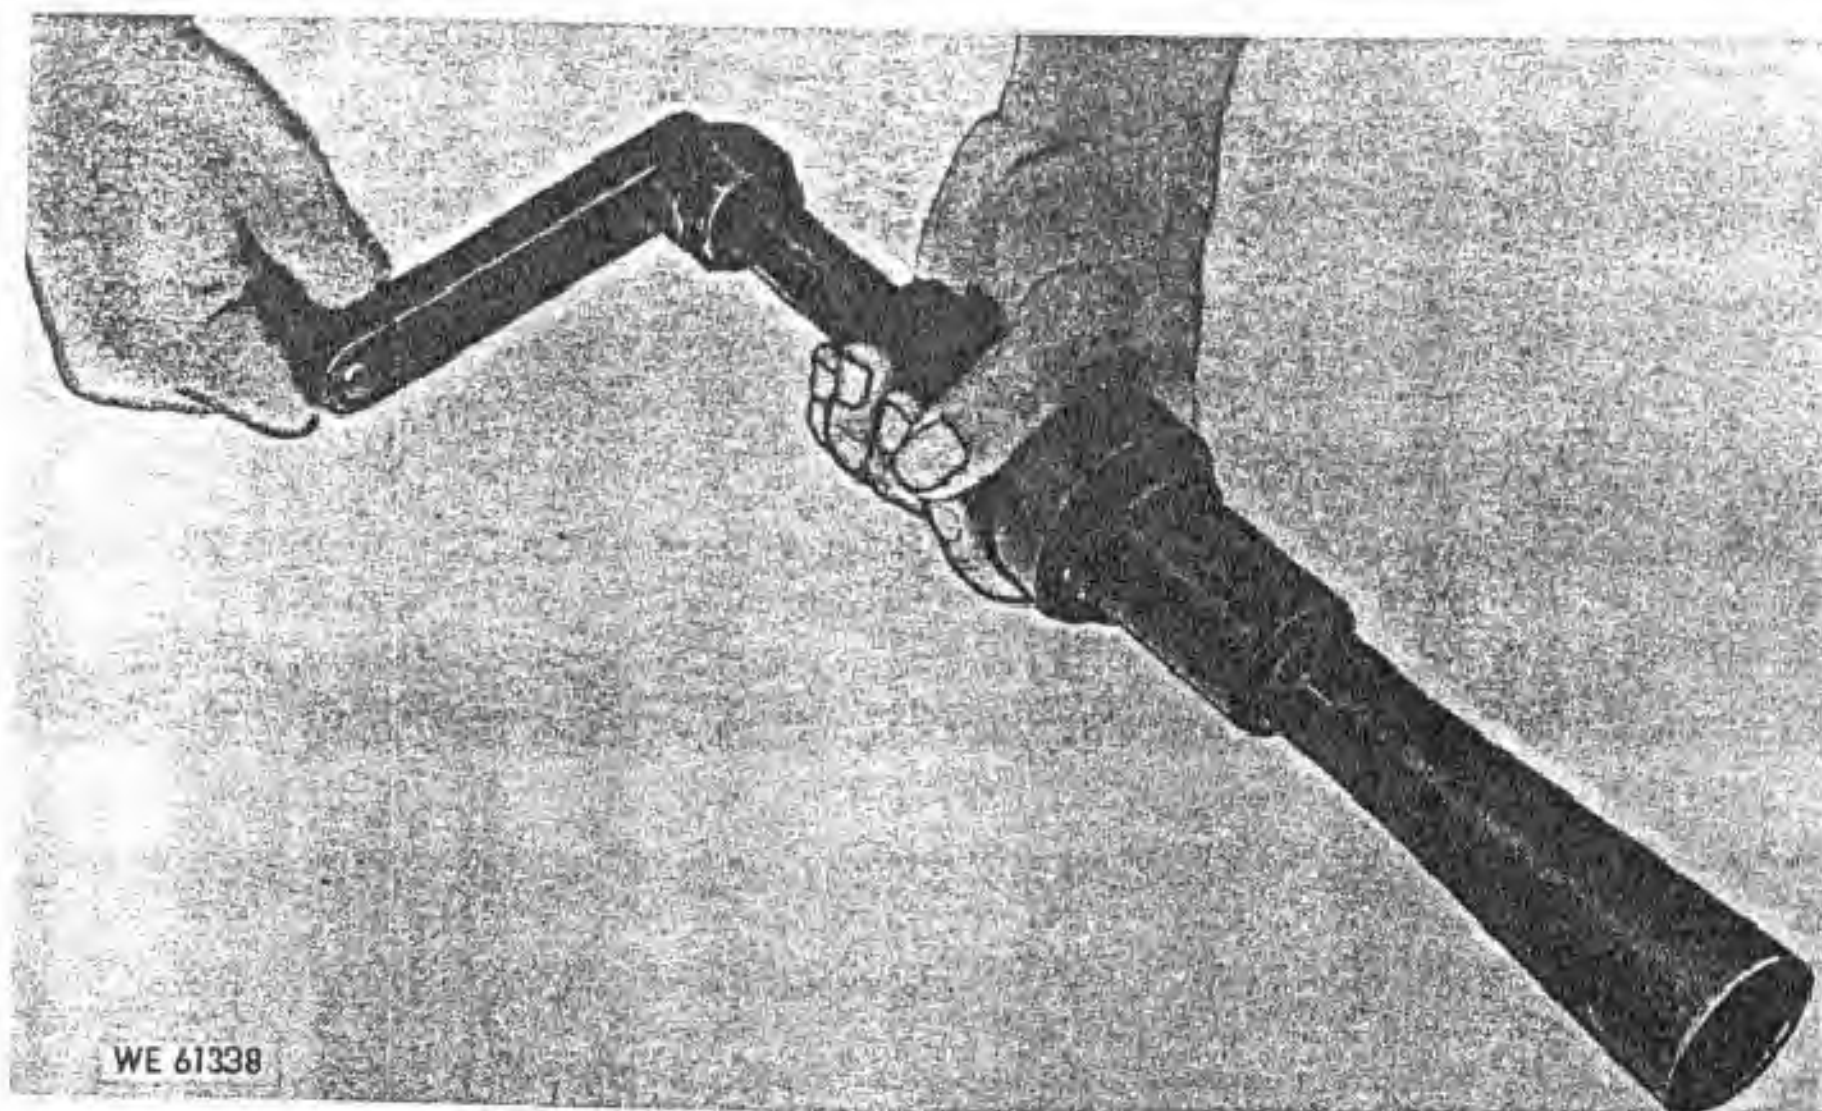

Figure 3-6. Maintenance procedures to determine serviceability of firing pin hole for Machine Gun, M37.

*Figure 3-7. Maintenance procedure for removing carbon from flash hider.*

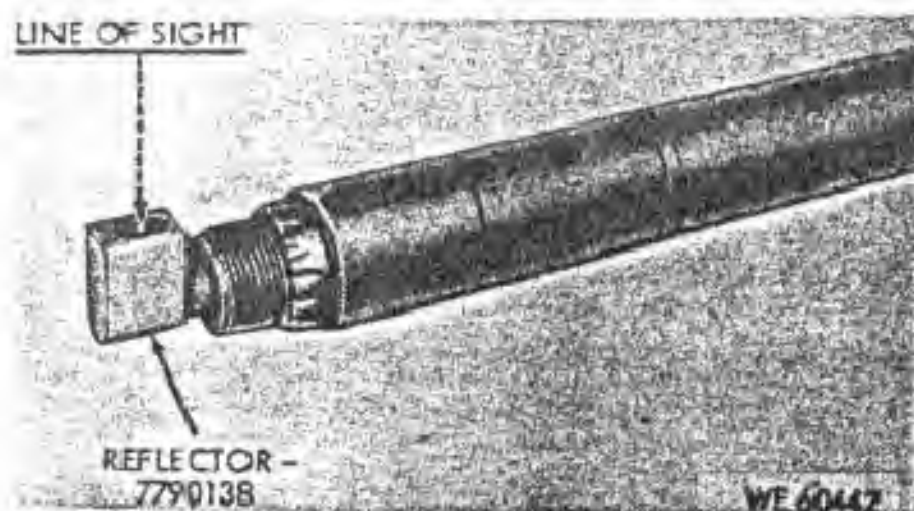

Figure 3-8. Maintenance procedures for checking barrel or barrel assembly with gun barrel reflector.

CAUTION: DO NOT GAGE HOT BARREL

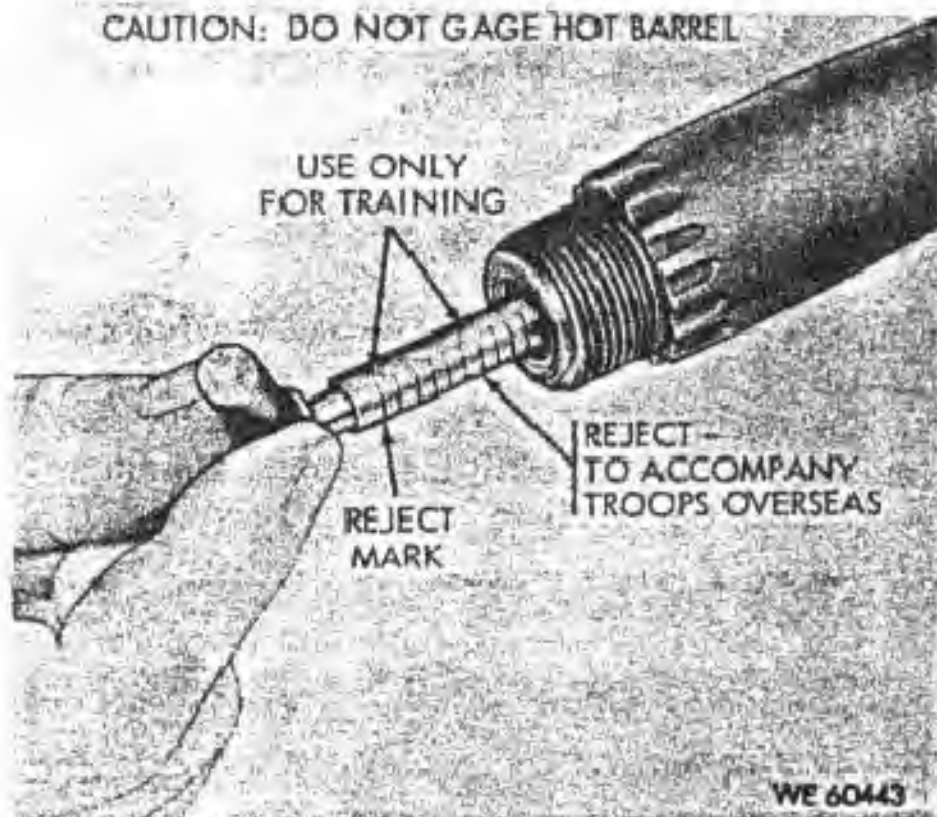

Figure 3-9. Maintenance procedures for determining serviceability of barrels with breech bore gage.

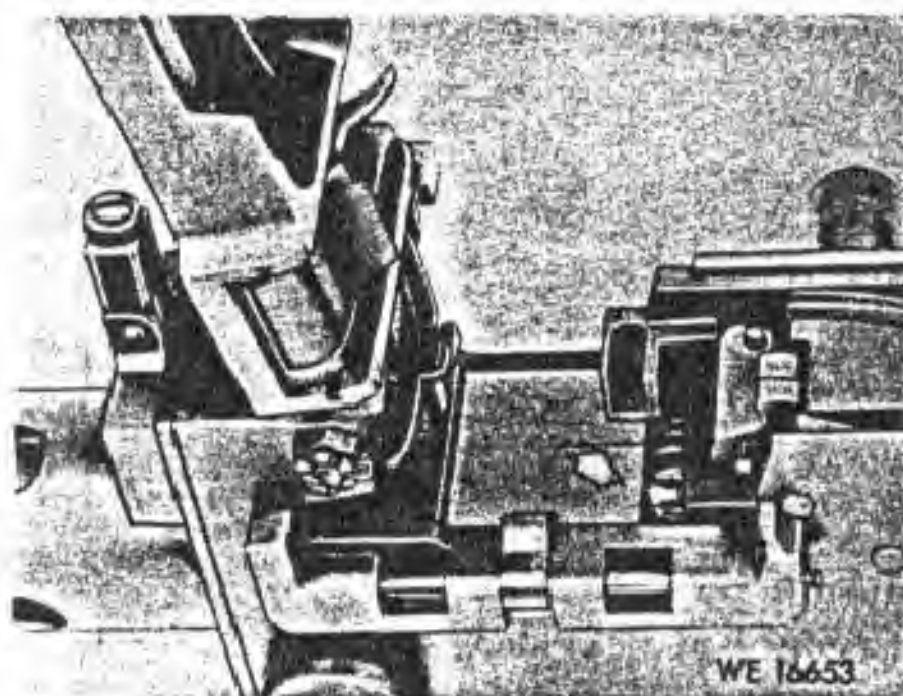

Figure 3-10. Maintenance procedures for determining serviceability of cracked steel trunnion block—NOT acceptable.

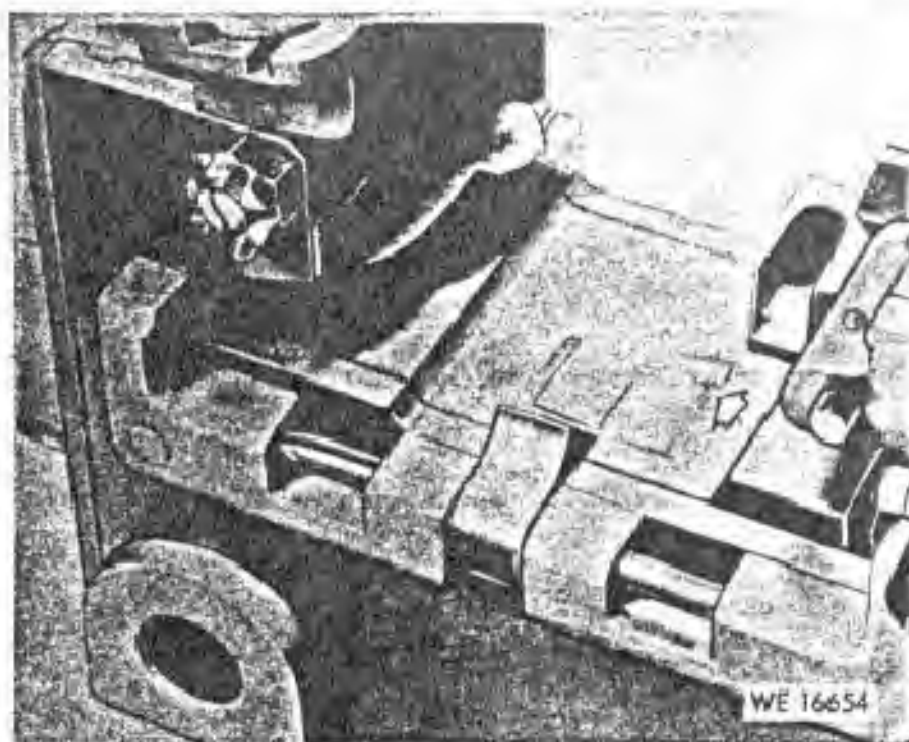

Figure 3-11. Maintenance procedures for determining serviceability of chrome-plated trunnion block with damage exceeding 0.010 inch—NOT acceptable.

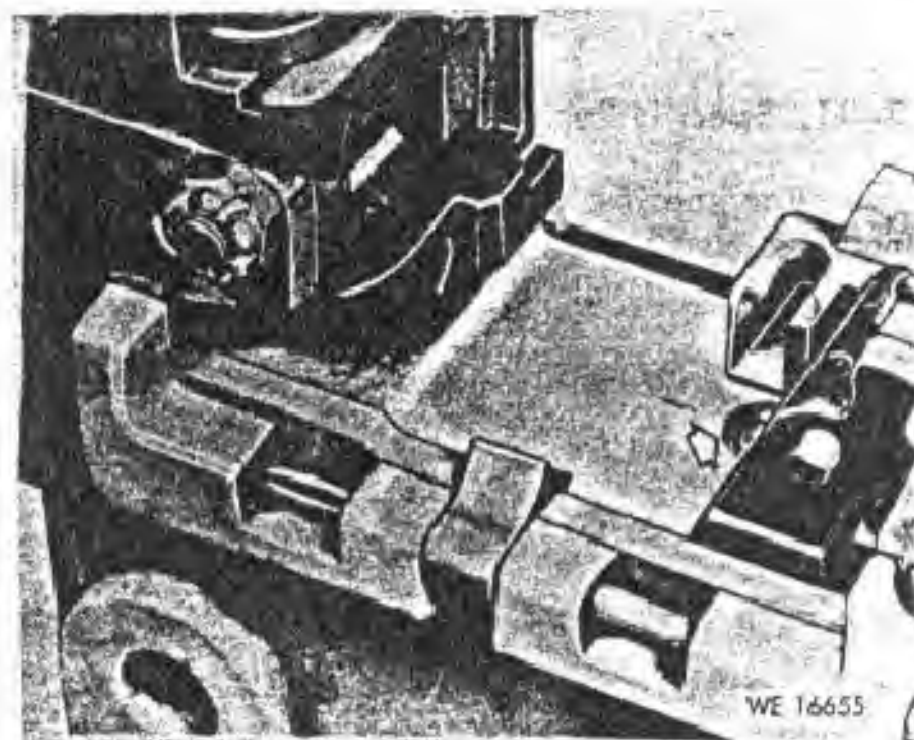

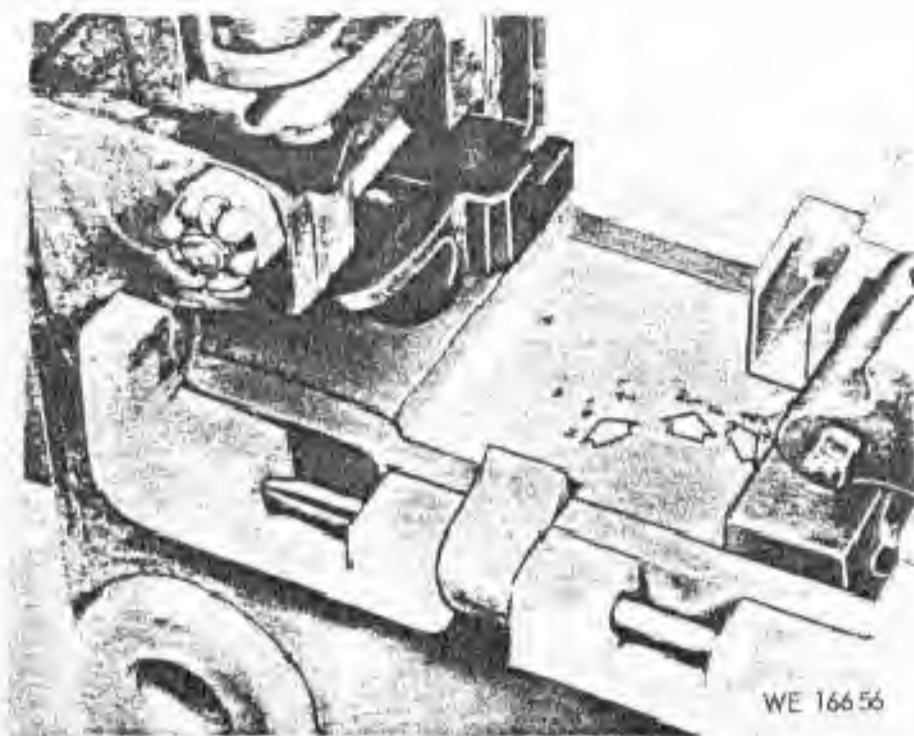

Figure 3-12. Maintenance procedures for determining serviceability of chrome-plated trunnion block with heavy chipped area—NOT acceptable.

*Figure 8-13. Maintenance procedures for determining serviceability of pitted and slightly chipped trunnion block—ACCEPTABLE.*

## Section VI. REPAIR INSTRUCTIONS FOR TRIPOD MOUNT, M2

### 3-11. Specific Repair Instructions

- a. For specific repair instructions of the Tripod Mount, M2, refer to table 3-4.
- b. For removal and installation of major

groups and assemblies, refer to TM 9-1005-212-10.

- c. Disassembly of the traversing and elevating mechanism is restricted to the absolute minimum required to replace defective components.

Table 3-4. Direct and General Support Maintenance Procedures for Tripod Mount

Group or assembly	Disassembly/assembly	Inspection	Repair	Tests and adjustments
Tripod mount		Visually inspect tripod mount for general appearance. Check to insure that all components are serviceable.	Repair or replace unserviceable components.	
Traversing and elevating mechanism assembly	Fig B-18 To disassemble/assemble upper elevating screw stop refer to figure 8-14.	Check for missing plug in lower end of sleeve. Check upper elevating screw stop and traversing slide lock lever for proper functioning. Check lower elevating screw stop spring and lock lever for tension and fit of spring in dovetailed spring seat. Test upper and lower elevating screws for binding. Check the dial pointer for looseness. In the elevating handwheel check headless pin for functioning on click ring and setting of handwheel with pointer. In the traversing handwheel check function of click pin, union nut and scale dial and check traversing screw for function with traversing handwheel (screw should not bind). Markings must be legible.	Replace items 1 thru 36, except 16, 18, 22, 25, and 29, fig B-18, if necessary.	Dial Pointer on handwheel and designation plate of upper elevating screw must coincide at "O" reading.
Head and leg groups groups	Fig B-19	Check front leg to insure that it opens and closes without binding. Check functioning of sliding sleeve and sleeve lock latch on right rear leg. In the tripod head, check pintle, bolt and nut for damaged threads, burs, and missing cotter pin. Check tripod head for cracks and burs. Check function of pintle and lock assembly. Check setscrew for staking. Check tension of helical compression springs in lock assembly. Check bearing for burs. Check pintle lock release cam for damage and pin for looseness. Check lock assembly housing screws for looseness and burs.	Replace items 1 thru 30 except 16, 25, 27, and 28, figure B-19, if needed.	The distance between sleeve and collar is not to be less than one-quarter or more than one-half inch before locking. Minimum clearance between pintle shoulder and tripod head 0.003 inch.

*Figure S-14. Maintenance procedures for utilizing screw stop tool on upper elevating mechanism of Tripod Mount, M2.*

## Section VII. DEPOT MAINTENANCE INSTRUCTIONS

### 3-12. General

a. Depot maintenance instructions are contained in USAWECOMDMWR 100-212 which is available through Commanding General, Headquarters, U. S. Army Weapons Command,

ATTN: AMSWE-SMM-SA, Rock Island, Illinois 61201.

b. Repair parts, special tools and equipment are listed in appendix B of this manual.

## CHAPTER 4

### FINAL INSPECTION

---

#### 4-1. General

The machine gun and mount must meet the limits of serviceability as indicated in tables 3-3 and 3-4.

#### 4-2. Function and Firing Tests

a. The machine gun that has been repaired should be function fired whenever possible, to assure proper operation. The machine gun that fails to meet functioning and firing tests is to

be corrected by replacement of defective components.

b. Upon completion of firing, machine gun will be properly cleaned and lubricated.

#### 4-3. Completion of Inspection

When the machine gun and/or mount have been restored to a completely serviceable condition, it shall be certified that the item is acceptable for "return to user" or for "return to stock".

## CHAPTER 5

### DESTRUCTION OF MATERIEL TO PREVENT ENEMY USE

---

#### 5-1. General

a. Destruction of the machine gun when subject to capture or abandonment in the combat zone, will be undertaken only when in the judgment of the commander concerned such action is necessary. If destruction is resorted to, the equipment must be so badly damaged that it cannot be restored to a usable condition in the combat

zone either by repair or cannibalization. The reporting of the destruction of equipment is to be through regular channels.

b. Priorities for destruction of repair parts are:

- (1) Bolt
- (2) Barrel
- (3) Sighting equipment
- (4) Mount

## APPENDIX B

# COMBINED ORGANIZATIONAL, DIRECT SUPPORT, GENERAL SUPPORT, AND DEPOT MAINTENANCE REPAIR PARTS AND SPECIAL TOOLS LIST

## Section I. INTRODUCTION

**B-1. Scope**

This appendix lists repair parts, special tools and equipment required for the performance of organizational, direct support, general support and depot maintenance of the machine guns and mount.

**B-2. General**

This Repair Parts and Special Tools List is divided into the following sections:

*a. Prescribed Load Allowance (PLA)—Section II.* A composite listing of repair parts, special tools, test and support equipment having quantitative allowances for initial stockage at the organizational level.

*b. Repair Parts—Section III.* A list of repair parts authorized for the performance of maintenance at the organizational level in figure and item number sequence.

*c. Special Tools, Test and Support Equipment—Section IV.* A list of special tools and equipment authorized for the performance of maintenance at the organizational level.

*d. Repair Parts—Section V.* A list of repair parts authorized for the performance of maintenance at the direct support, general support, and depot level in figure and item number sequence.

*e. Special Tools and Equipment—Section VI.* A list of special tools and equipment authorized for the performance of maintenance at the direct support, general support, and depot level.

*f. Federal Stock Number and Reference Number Index—Section VII.* A list of Federal stock numbers in ascending numerical sequence, followed by a list of reference numbers appearing in all the listings, in ascending alpha-numeric sequence, cross-referenced to the illustration figure number and item number.

**B-3. Explanation of Columns**

The following provides an explanation of columns in the tabular lists in Sections II through VI:

*a. Source, Maintenance, and Recoverability Codes (SMR).*

(1) *Source Code.* Indicates the selection status and source for the listed item. Source codes used are:

Code	Explanation
P	Repair parts which are stocked in or supplied from the GSA/DSA, or Army supply system, and authorized for use at indicated maintenance categories.
P2	Repair parts which are procured and stocked for insurance purposes because the combat or military essentiality of the end item dictates that a minimum quantity be available in the supply system.
M	Repair parts which are not procured or stocked but are to be manufactured in indicated maintenance levels.
A	Assemblies which are not procured or stocked as such but are made up of two or more units. Such component units carry individual FSNs and descriptions, are procured and stocked separately and can be assembled to form the required assembly at indicated maintenance categories.
X	Parts and assemblies which are not procured or stocked and the mortality of which is normally below that of the applicable end item or component. The failure of such part or assembly should result in retirement of the end item from the supply system.
X1	Repair parts which are not procured or stocked. The requirement for such items will be filled by use of the next higher assembly or component.
X2	Repair parts which are not stocked. The indicated maintenance category requiring such repair parts will attempt to obtain through cannibalization; if not obtainable through cannibalization, such repair parts will be requisitioned with supporting justification through normal supply channels.

Code	Explanation
G	Major assemblies that are procured with PEMA funds for initial issue only to be used as exchange assemblies at DSU and GSU level. These assemblies will not be stocked above DSU and GSU level or returned to Depot supply level.

(2) *Maintenance Code*. Indicates the lowest category of maintenance authorized to install the listed item. The maintenance level codes are:

Code	Explanation
C	Crew or operator
O	Organizational
F	Direct Support
H	General Support
D	Depot

(3) *Recoverability Code*. Indicates whether unserviceable items should be returned for recovery or salvage. Items not coded are expendable. Recoverability codes are:

Code	Explanation
R	Applied to repair parts (assemblies and components) which are considered economically repairable at Direct and General support maintenance levels. When the maintenance capability to repair these items does not exist, they are normally disposed of at the GS level. When supply considerations dictate, some of these repair parts may be listed for automatic return to supply for Depot level repair as set forth in AR 710-50. When so listed, they will be replaced by supply on an exchange basis.
T	High dollar value recoverable repair parts which are subject to special handling and are issued on an exchange basis. Such repair parts are normally repaired or overhauled at depot maintenance activities.
U	Repair parts specifically selected for salvage by reclamation units because of precious metal content, critical materials, high dollar value reusable casings, or castings.
S	Repair parts and assemblies which are economically repairable at DSU and GSU activities and normally are furnished by supply on an exchange basis. When items are determined by a GSU to be uneconomically repairable, they will be evacuated to a depot for evaluation and analysis before final disposition.

No Code Part will be considered expendable. Indicated

*b. Federal Stock Number*. Indicates the Federal stock number assigned to the item and will be used for requisitioning purposes.

*c. Description*. Indicates the Federal item name and any additional description of the item required. The abbreviation "w/e" when used as a part of the nomenclature, indicates the Federal stock number includes all armament, equipment, accessories, and repair parts issued with the item. A part number or other reference number is fol-

lowed by the applicable five-digit Federal supply code for manufacturers in parentheses.

*d. Unit of Measure (U/M)*. A 2 character alphabetic abbreviation indicating the amount or quantity of the item upon which the allowances are based, e.g., ft, ea, pr, etc.

*e. Quantity Incorporated in Unit*. Indicates the quantity of the item used in the functional group or assembly. A "V" appearing in this column in lieu of a quantity indicates that a definite quantity cannot be indicated (e.g. shims, spacers, etc.).

*f. 15-Day Organizational Maintenance Allowances*.

(1) The allowance columns are divided into four subcolumns. Indicated in each subcolumn opposite the first appearance of each item is the total quantity of items authorized for the number of equipments supported. Subsequent appearances of the same item will have the letters "REF" in the allowance columns. Items authorized for use as required but not for initial stockage are identified with an asterisk in the allowance column.

(2) The quantitative allowances for organizational level of maintenance represents one initial prescribed load for a 15-day period for the number of equipments supported. Units and organizations authorized additional prescribed loads will multiply the number of prescribed loads authorized by the quantity of repair parts reflected in the appropriate density column to obtain the total quantity of repair parts authorized.

(3) Organizational units providing maintenance for more than 100 of these equipments shall determine the total quantity of parts required by converting the equipment quantity to a decimal factor by placing a decimal point before the next to last digit of the number to indicate hundredths, and multiplying the decimal factor by the parts quantity authorized in the 51-100 allowance column. Example, authorized allowance for 51-100 equipments is 12; for 140 equipments, multiply 12 by 1.40 or 16.80 rounded off to 17 parts required.

(4) Subsequent changes to allowances will be limited as follows: No change in the range of items is authorized. If additional items are considered necessary, recommendation should be ter, U. S. Army Weapons Command, ATTN: AMSWE-SMM-SA, Rock Island, Illinois 61201, for exception or revision to the allowance list. Revision to the range of items authorized will be made by the above address based upon en-

accessories, and repair parts issued with the item. A part number or other reference number is following experience, demand data, or TAERS information.

*g. 30-Day DS/GS Maintenance Allowances.*

*Note.* Allowances in GS column are for GS maintenance only.

(1) The allowance columns are divided into three subcolumns. Indicated in each subcolumn, opposite the first appearance of each item, is the total quantity of items authorized for the number of equipments supported. Subsequent appearances of the same item will have the letters "REF" in the applicable allowance columns. Items authorized for use as required but not for initial stockage are identified with an asterisk in the allowance column.

(2) The quantitative allowances for DS/GS levels of maintenance will represent initial stockage for a 30-day period for the number of equipments supported.

(3) Determination of the total quantity of parts required for maintenance of more than 100 of these equipments can be accomplished by converting the equipment quantity to a decimal factor by placing a decimal point before the next to last digit of the number to indicate hundredths, and multiplying the decimal factor by the parts quantity authorized in the 51-100 allowance column. Example, authorized allowance for 51-100 equipments is 40; for 150 equipments, multiply 40 by 1.50 or 60 parts required.

*h. 1-Year Allowances Per 100 Equipments/Contingency Planning Purposes.* Indicates opposite the first appearance of each item the total quantity required for distribution and contingency planning purposes. The range of items indicates total quantities of all authorized items required to provide for adequate support of 100 equipments for one year.

*i. Depot Maintenance Allowance Per 100 Equipments.* Indicates opposite the first appearance of each item the total quantity authorized for depot maintenance of 100 equipments. Subsequent appearances of the same item will have the letters "REF" in the allowance column. Items authorized for use as required but not for initial stockage are identified with an asterisk in the allowance column.

*j. Illustration.*

(1) *Figure Number.* Indicates the figure number of the illustration in which the item is shown.

(2) *Item Number.* Indicates the callout

number used to reference the item in the illustration.

#### B-4. Special Information

a. Identification of the usable on codes of this publication are:

Code	Used on
Blank	M1919A4, M1919A6, M37 w/o sights, and M37 w/sights
B	M1919A4
D	M1919A6
E	M1919A6
O	M37 w/o sights and M37 w/sights
S	M37 w/sights, M37 w/o sights, and M1919A4
V	M37 w/sights, M1919A4, and M1919A6
W	M2

b. Exploded views in appendix B are numbered in disassembly sequence.

#### B-5. How to Locate Repair Parts

a. When Federal stock number or reference number is unknown:

(1) *First.* Using the table of contents determine the functional group or assembly within which the repair part belongs. This is necessary since illustrations are prepared for the functional group or assembly, and the listings are divided into the same groups.

(2) *Second.* Find the illustration covering the functional group or assembly to which the repair part belongs.

(3) *Third.* Identify the repair part on the illustration and note the illustration figure and item number of the repair part.

(4) *Fourth.* Using the Repair Parts Listing, find the functional group or assembly to which the repair part belongs and locate the illustration figure and item number noted on the illustration.

b. When Federal stock number or reference number is known:

(1) *First.* Using the Index of Federal Stock Numbers and Reference Numbers find the pertinent Federal stock number or reference number. This index is in ascending FSN sequence followed by a list of reference numbers in alphanumeric sequence, cross-referenced to the illustration figure number and item number.

(2) *Second.* Using the Repair Parts Listing, find the functional group or assembly of the repair part and the illustration figure number and item number referenced in the Index of Federal Stock Numbers and Reference Numbers.

**B-6. Abbreviations**

Abbreviations	Explanation
ADJ _____	adjust
BLK-OXIDE FIN _____	black-oxide finish
CD- or ZN-PLTD _____	cadmium or zinc plated
CHAM _____	chamfer
CK-HD _____	countersunk -head
CRES _____	corrosion resistant steel
CSK _____	countersunk
FL-PT _____	flat-point
LT _____	light
MET _____	metal
NC _____	National coarse (thread)
NF _____	National fine (thread)
PASS-FIN _____	passivated finish

Abbreviations	Explanation
PHOS-BLK-FIN _____	phosphate black finish
SL _____	spool
SLTD _____	slotted
TRAV _____	traversing
UNF _____	unified fine (thread)
U/ON _____	used on
VCI _____	volatile corrosion inhibitor

**B-7. Federal Supply Codes for Manufacturers**

Codes	Manufacturer
19204 ____	Rock Island Arsenal
19207 ____	U. S. Army Tank Automotive Command
96906 ____	Military Standard

## APPENDIX C

### MAINTENANCE ALLOCATION CHART

#### Section I. INTRODUCTION

##### C-1. General

The maintenance allocation chart indicates specific maintenance operations performed at the proper maintenance levels. Deviation from maintenance operations allocated in the chart is authorized only upon approval of the Commanding Officer.

##### C-2. Maintenance Functions

The maintenance allocation chart designates overall responsibility for the maintenance function of an end item or assembly. Maintenance functions will be limited to and defined as follows:

*a. Inspect.* To determine serviceability of an item by comparing its physical, mechanical, and electrical characteristics with established standards.

*b. Test.* To verify serviceability and to detect electrical or mechanical failure by use of test equipment.

*c. Service.* To clean, to preserve, to charge, and to add fuel, lubricants, cooling agents and air.

*d. Adjust.* To rectify to the extent necessary to bring into proper operating range.

*e. Align.* To adjust specified variable elements of an item to bring to optimum performance.

*f. Calibrate.* To determine the corrections to be made in the readings of instruments or test equipment used in precise measurement. Consists of the comparison of two instruments, one of which is a certified standard of known accuracy, to detect and adjust any discrepancy in the accuracy of the instrument being compared with the certified standard.

*g. Install.* To set up for use in an operational environment such as an emplacement, site, or vehicle.

*h. Replace.* To replace unserviceable items with serviceable assemblies, subassemblies, or parts.

*i. Repair.* Those maintenance operations necessary to restore an item to serviceable condition through correction of material damage or a specific failure. Repair may be accomplished at each category of maintenance.

*j. Overhaul.* Normally, the highest degree of maintenance performed by the Army in order to minimize time work in process is consistent with quality and economy of operation. It consists of that maintenance necessary to restore an item to completely serviceable condition as prescribed by maintenance standards in technical publications for each item of equipment. Overhaul normally does not return an item to like new, zero mileage, or zero hour condition.

*k. Rebuild.* The highest degree of materiel maintenance. It consists of restoring equipment as nearly as possible to new condition in accordance with original manufacturing standards. Rebuild is performed only when required by operational considerations or other paramount factors and then only at the depot maintenance category. Rebuild reduces to zero the hours or miles the equipment, or component thereof, has been in use.

*l. Symbols.* The uppercase letter placed in the appropriate column indicates the lowest level at which that particular maintenance function is to be performed.

##### C-3. Explanation of Format

The purpose and use of the format are as follows:

*a. Column 1, Group Number.* Column 1 lists group numbers the purpose of which is to identify components, assemblies, subassemblies and modules with the next higher assembly.
